- floating header, for example pag nag scroll up lalabas ng onti yung header. Check mo pic, need pa kasi mag scroll sa pinaka mataas para makita yung sa header/menu

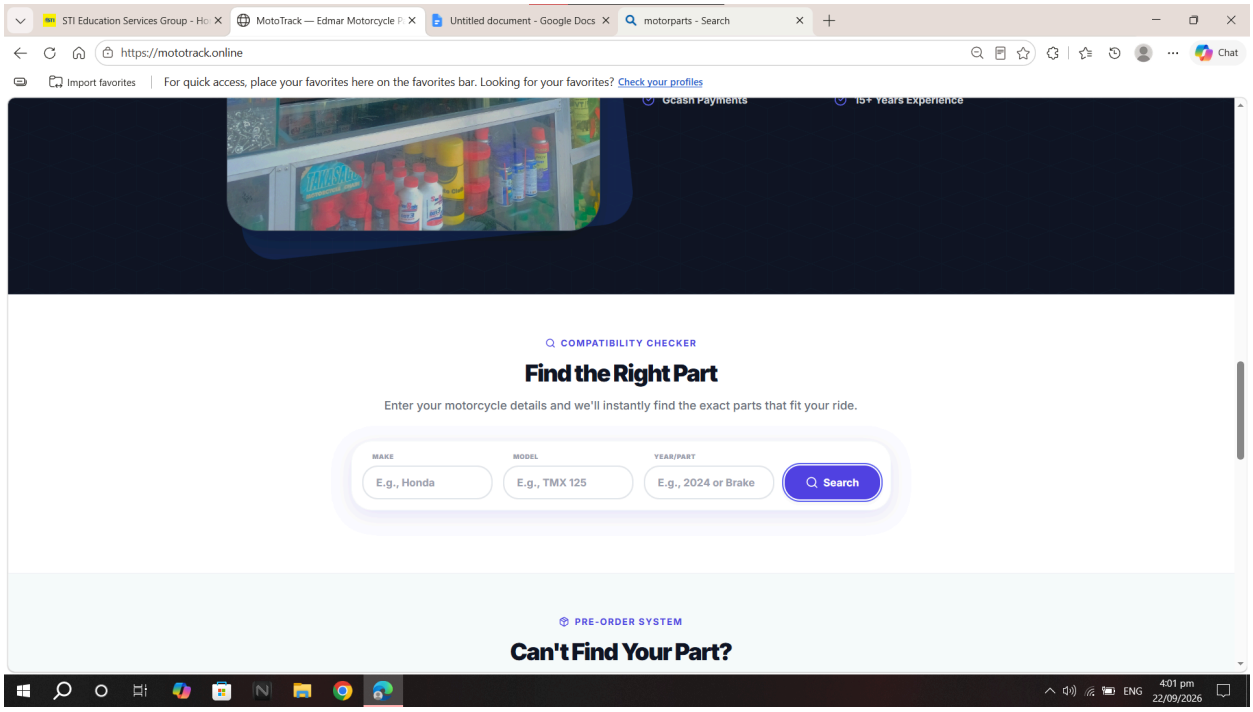

- yung sa container daw baka nagkapre-parehas kasi nag bblur pag cliniclick yung menu, need ayusin. Dapat hindi nabblur yung iba. Also, yung header dyan, dapat yung naka dissolve, hindi yung ganyan sa menu. Magiging ganyan lang yung menu pag mobile version. Magkaiba yung header/menu sa web version sa mobile version ganon

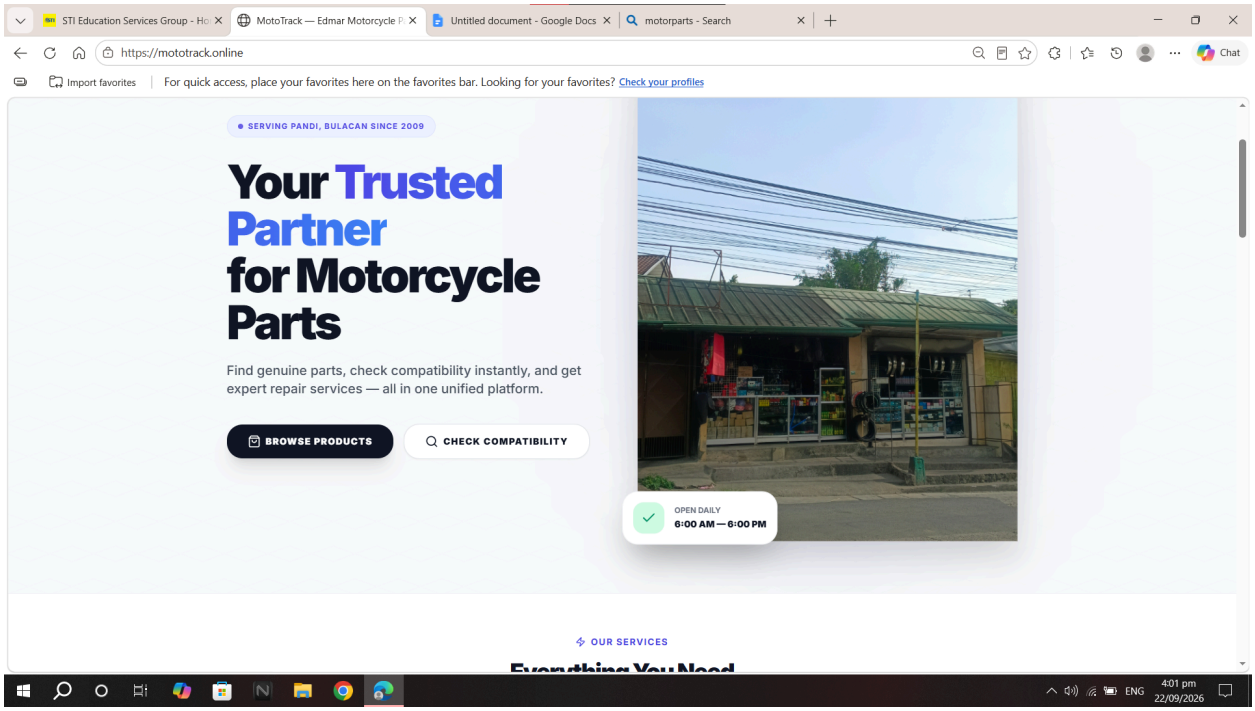

- yung sa compat checker need ayusin kasi nag sserver error. Eto, sabi ni sir baka raw di pa nacconnect sa database, nag eeror kasi. Hindi searchable
- compat checker: need nakalagay sa description ng products yung company name, brand name, specific vehicle, add rin year and versions, for example
- drop down nalang yung sa brand and model since specific brands and models yung atin hindi general
- check yung sa compat checker sa year/parts, specific parts, product id ganon

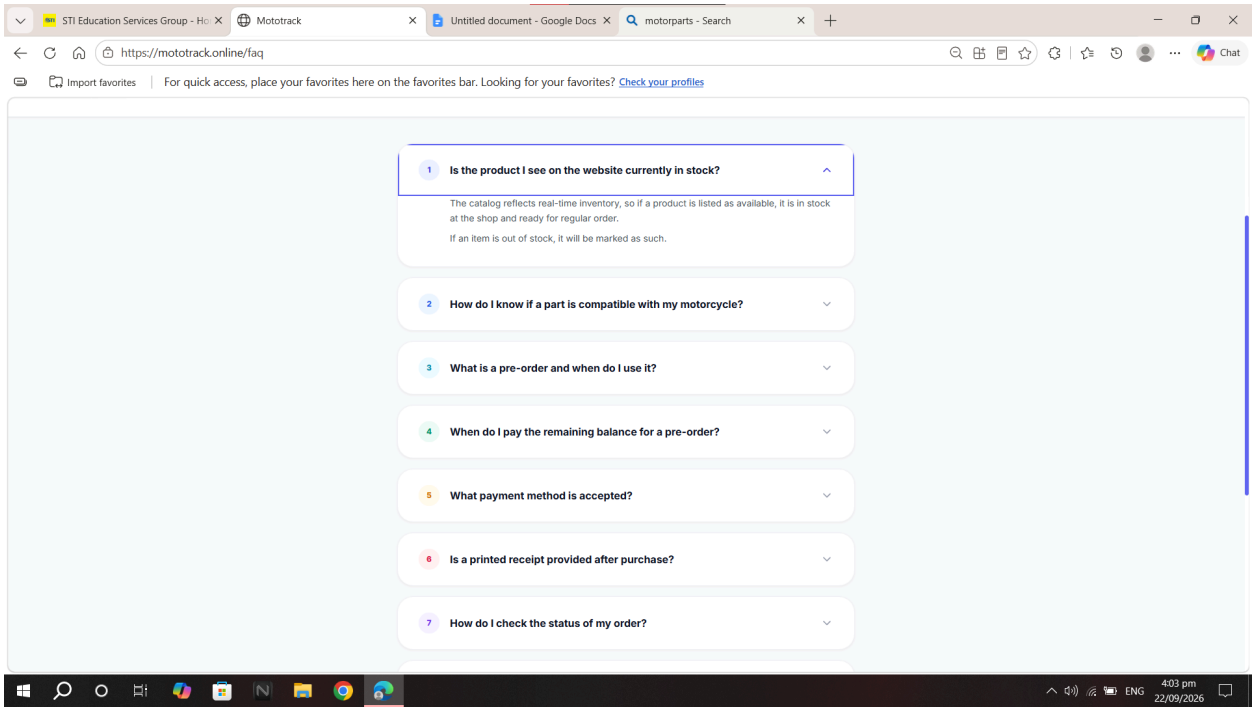

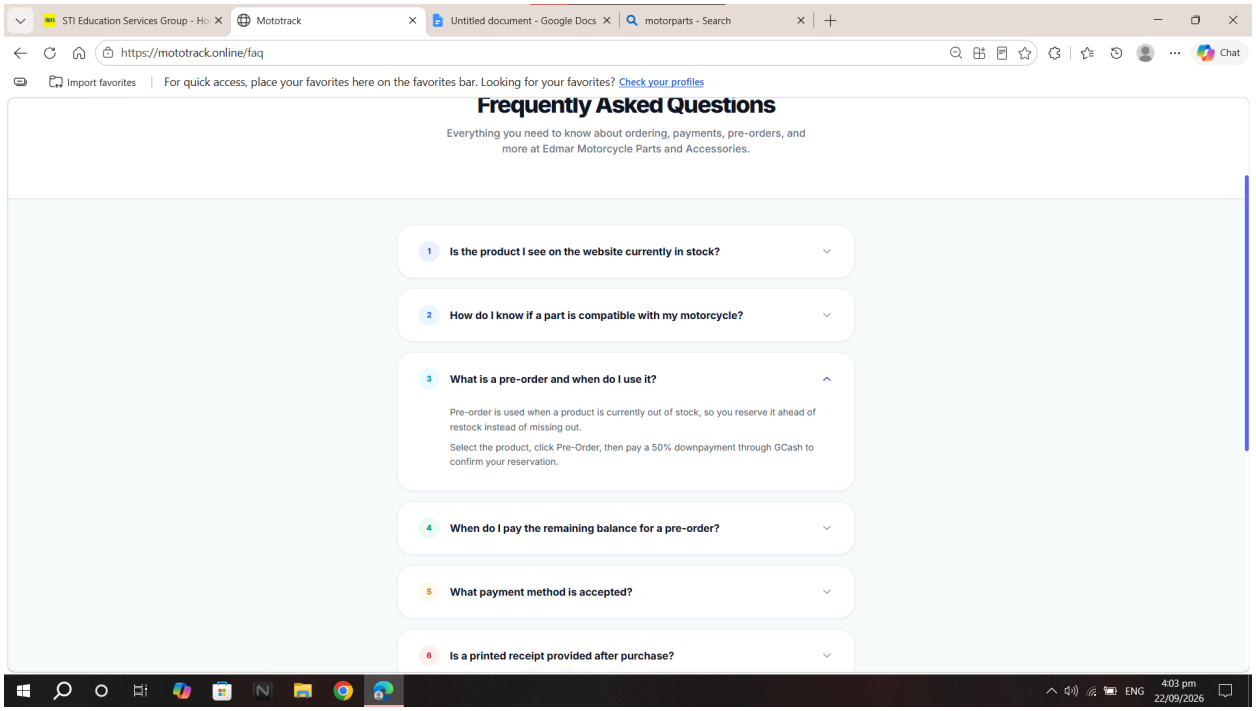

- alisin yung compat checker sa landing page(as in alisin na), since may compat checker naman na don sa baba nung product catalog sa landing page. Bale pag clinick yung “check compatibility” sa 2nd pic sa tabi nung browse products is mag reredirect sa pinaka solong page ng compat checker

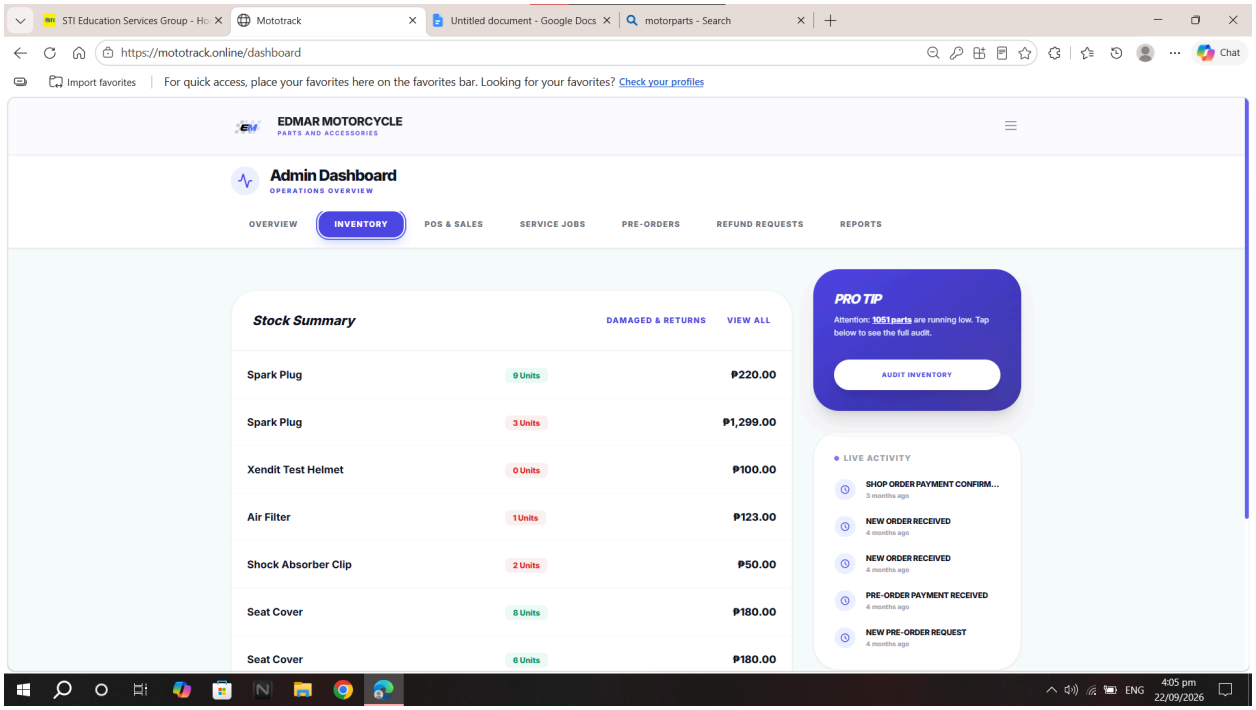

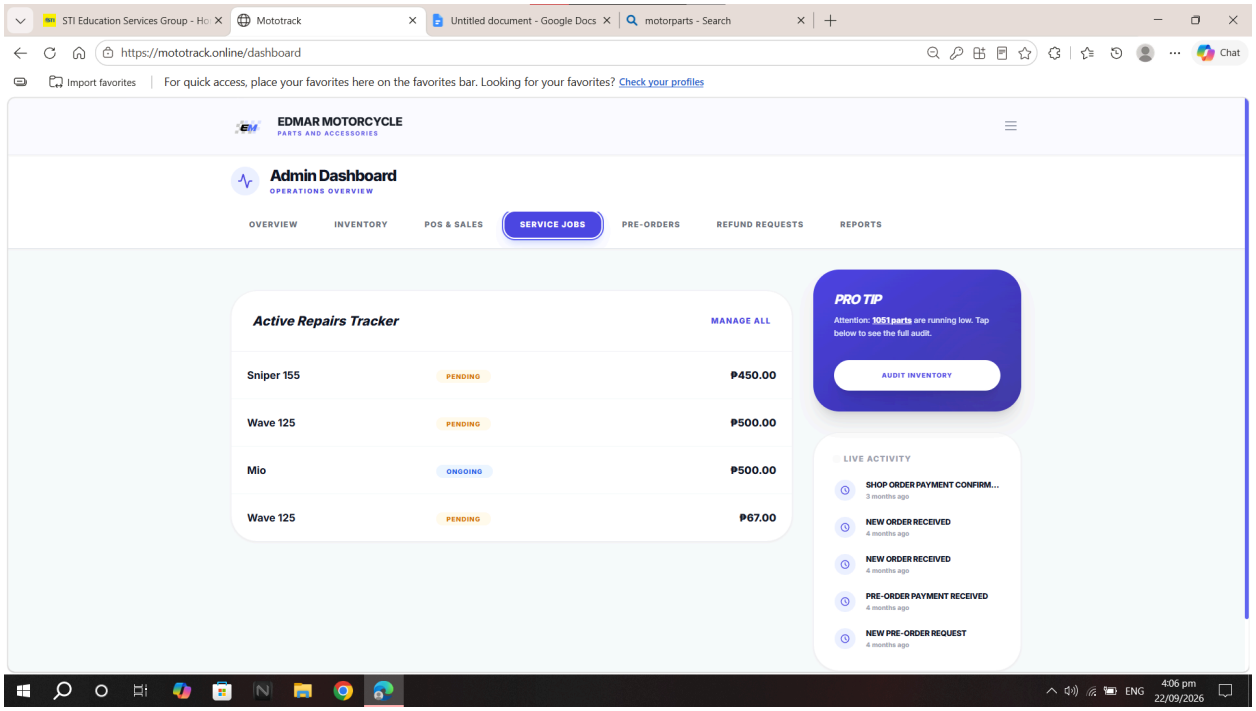

- yung border, tanggalin nalang yung highlighted sa lahat, gaya nung sa faqs. Check second pic mas malinis for faqs. Yung sa dashboards din sa admin and customer pacheck and pakiayos para di magmukhang putol yung container. Check 3rd pic for reference sa dashboard na mukhang putol

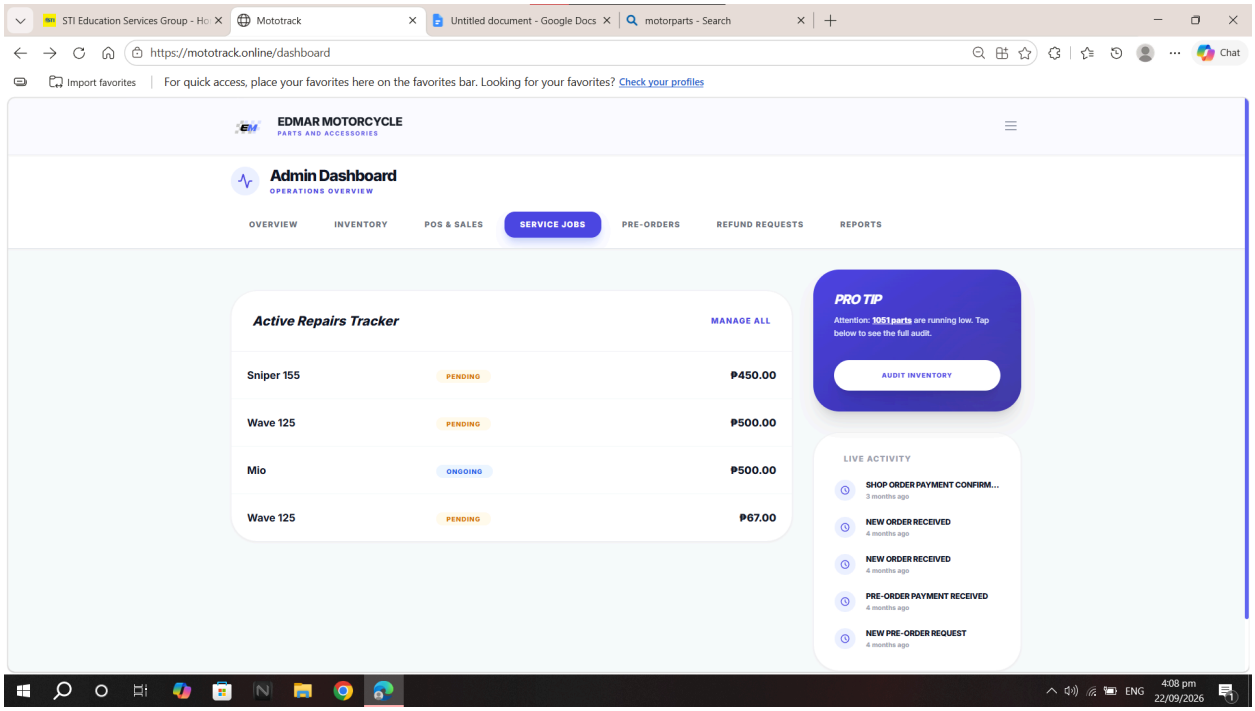

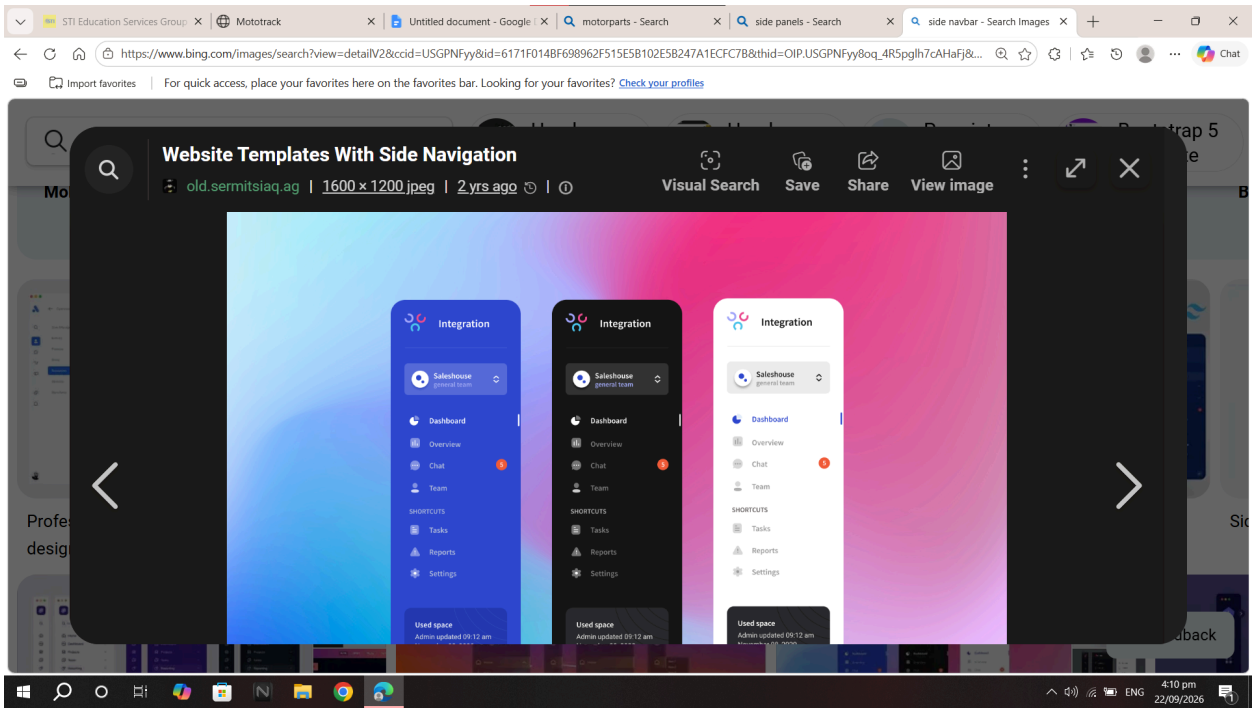

- sa track repairs dapat kita yung pinaka issue kahit hindi iclick yung manage all. tapos pano mangyayari kapag maraming repair per motor

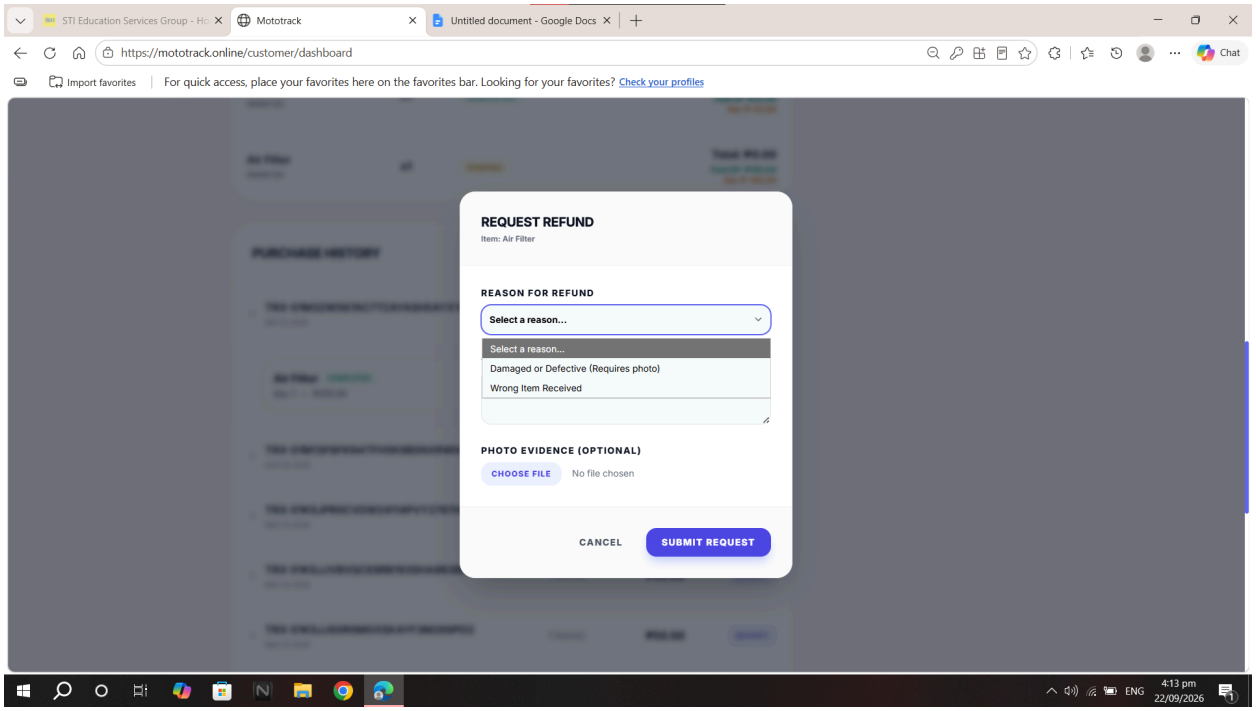

- yung transitioning daw dapat per click nung button dapat maayos, kunware clinick yung home tas click dashboard, basta maayos flow and redirection per click, hindi yung kung saan-saan mapupunta
- realtime yung inventory, for example pag umorder kusang mababawasan yung sa inventory
- pag mobile ui, i center lahat nung elements tas justify para raw maayos. Ayusin daw ui

- yung sa dashboard sa admin and customer nasa left side na, side panel. Check second pic for reference, ganon nalang daw dapat
- sa customer dashboard makikita pag clinick is yung welcome tapos updates tapos add ng calendar
- alisin yung live activity sa admin dashboard
- alisin yung rider and pro tip sa customer dashboard and admin dashboard

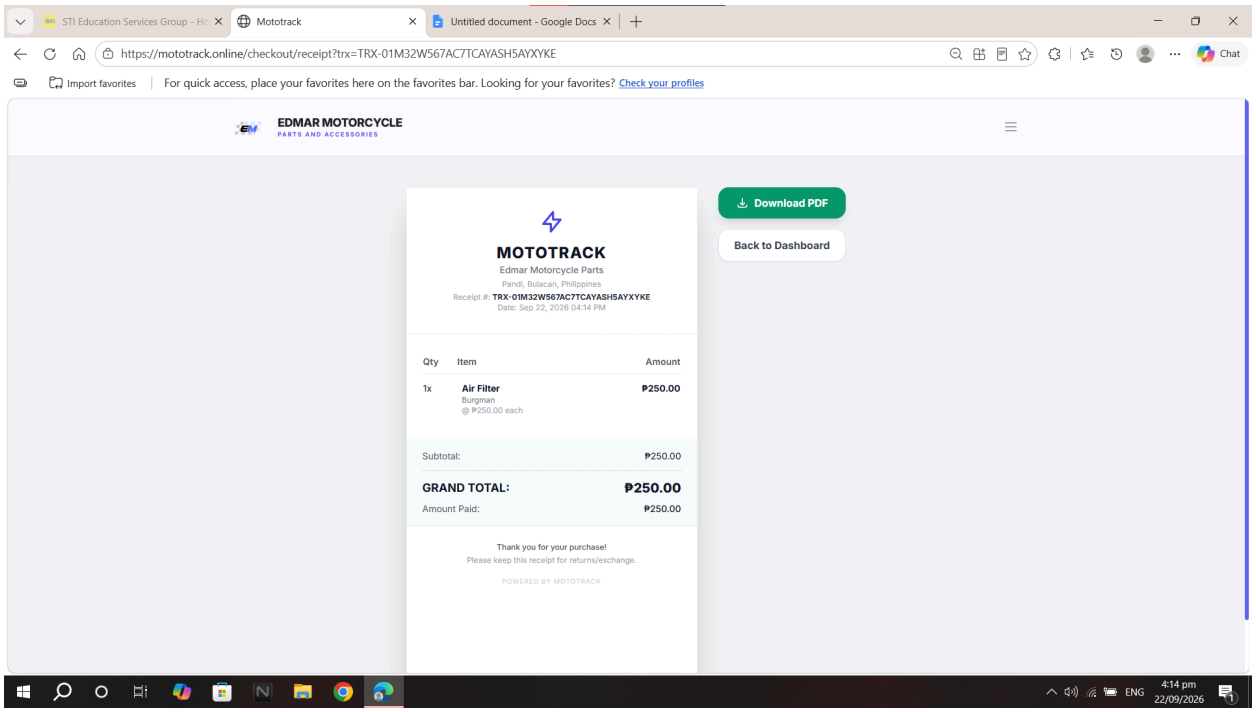

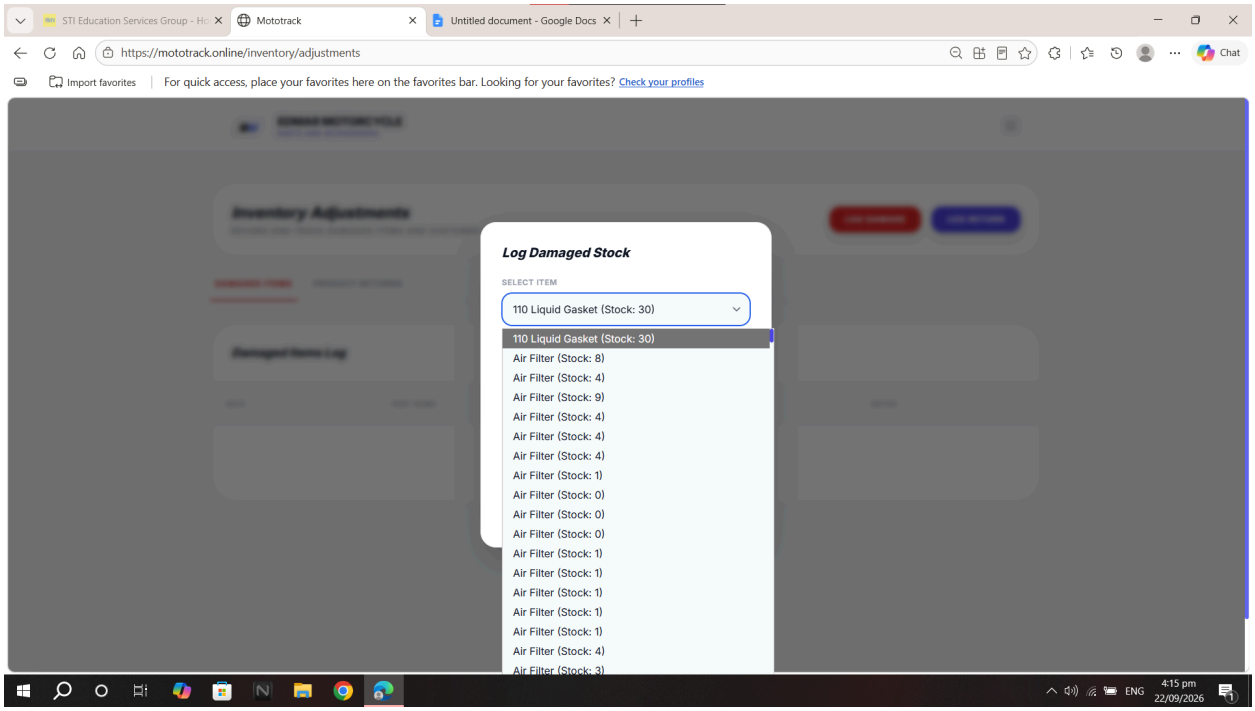

- hindi clickable and hindi part ng choices yung "select an option" sa refund and sa iba, basta grayish lang
- sa refund nung customer dapat may storage or makikita saan napunta yung pinarefund na product

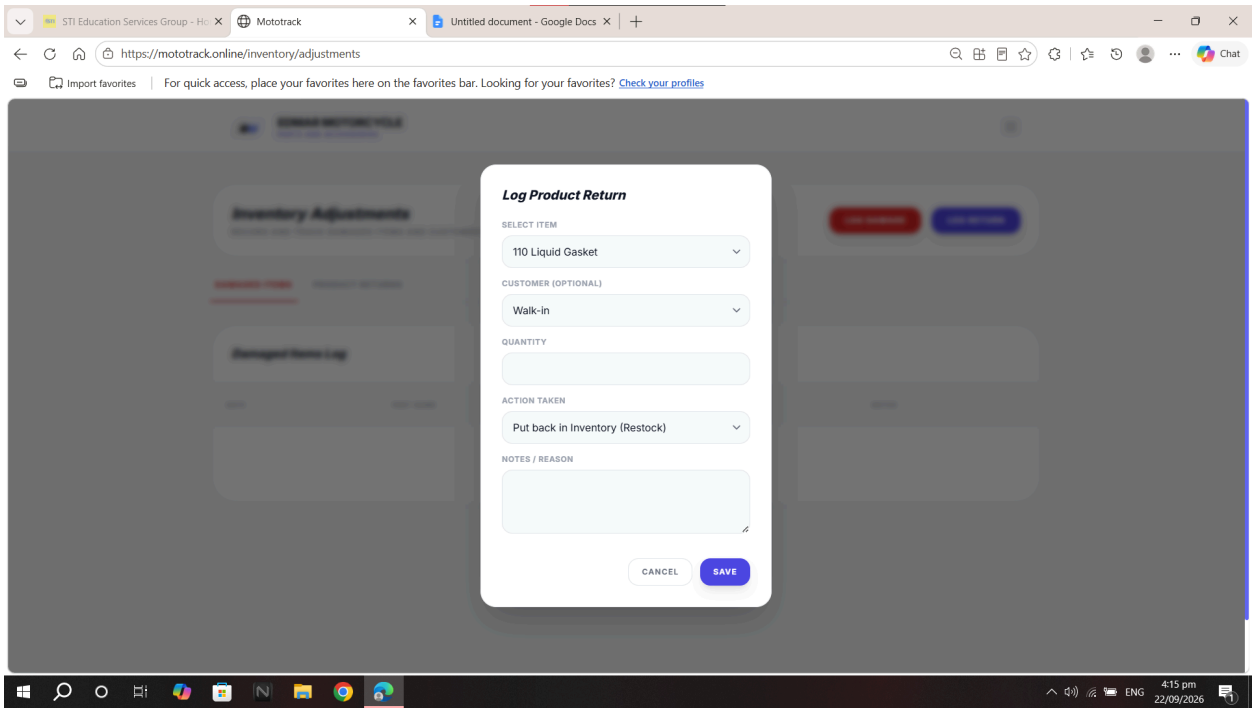

- sa receipt dapat nakalagay is "this is not an official receipt" sa baba

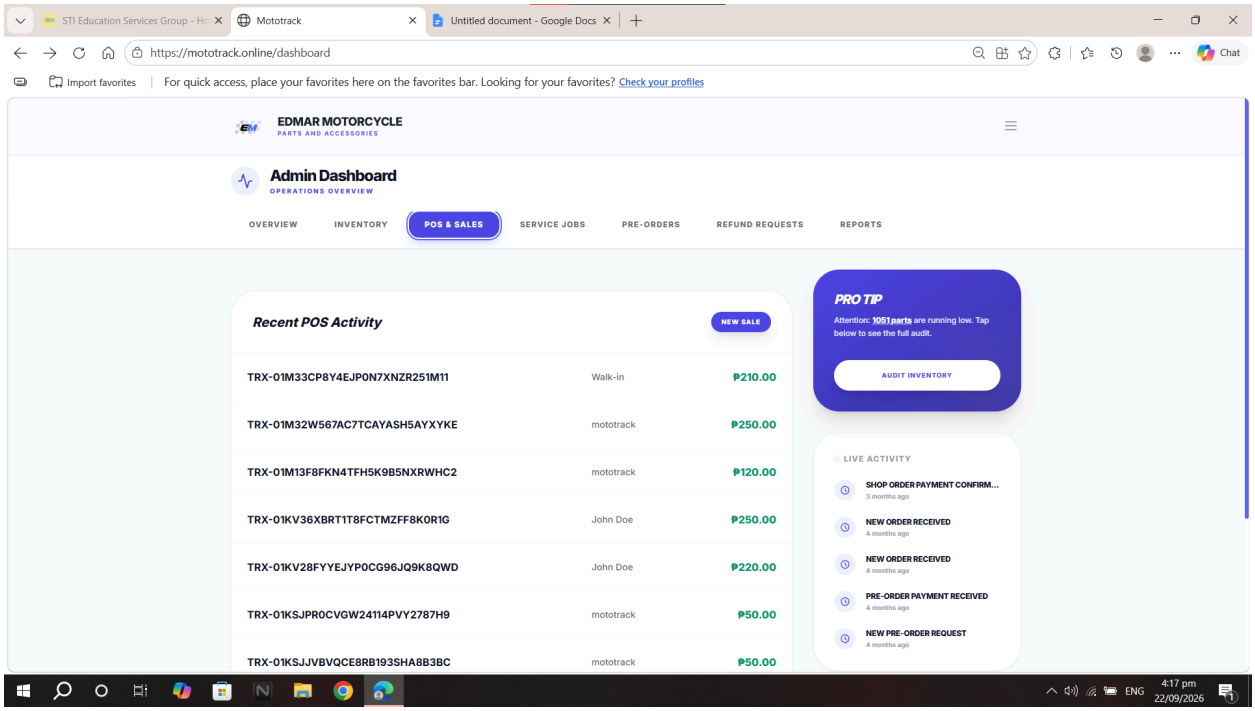

- yung sa return and damage log dapat hindi drop down menu. like searchable drop down dapat sabi ni sir. tapos dapat specific yung nasa products, makita dapat brand, make, model ganon
- product id for inventory
- yung sa quantity dapat type nalang sa damaged and return logs tapos dapat maayos yung names, alisin name(lily bogs) baka raw mag redef agad

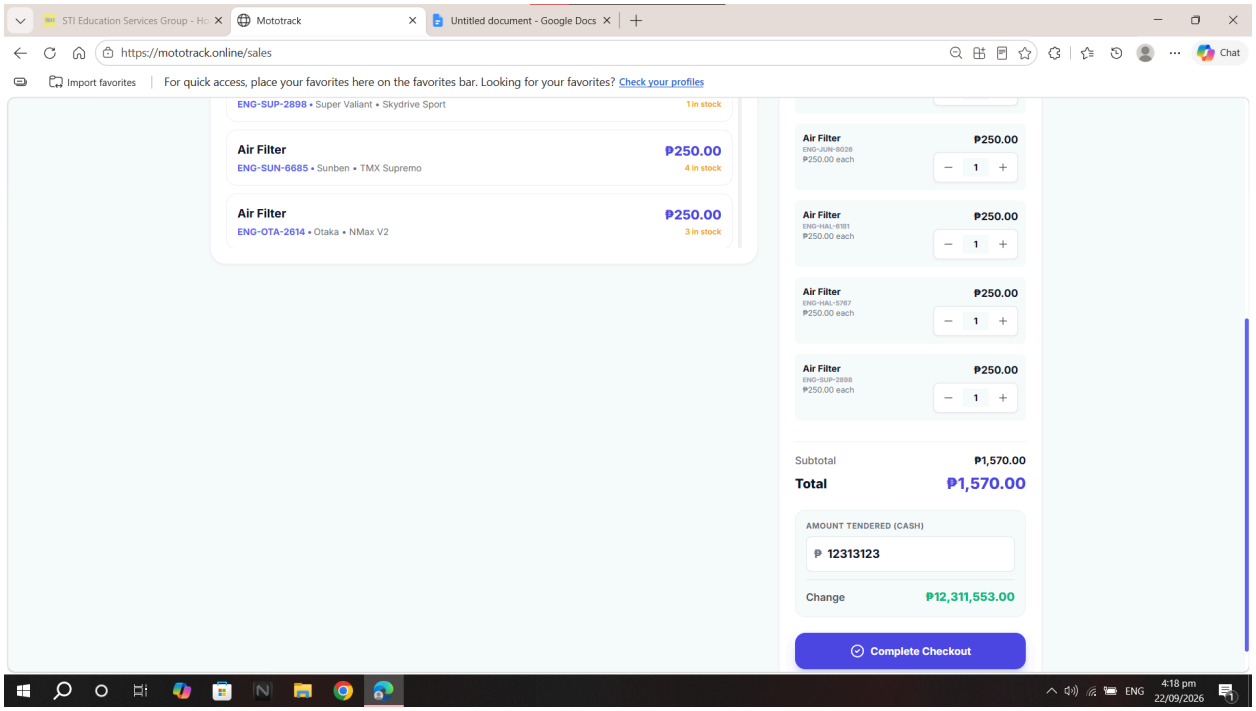

- sa reason na pag approve and reject nung product dapat parehas may reasons bago maapprove or reject kasi nakalagay lang don is need reasons sa reject, dapat sa approve din meron hindi basata approve

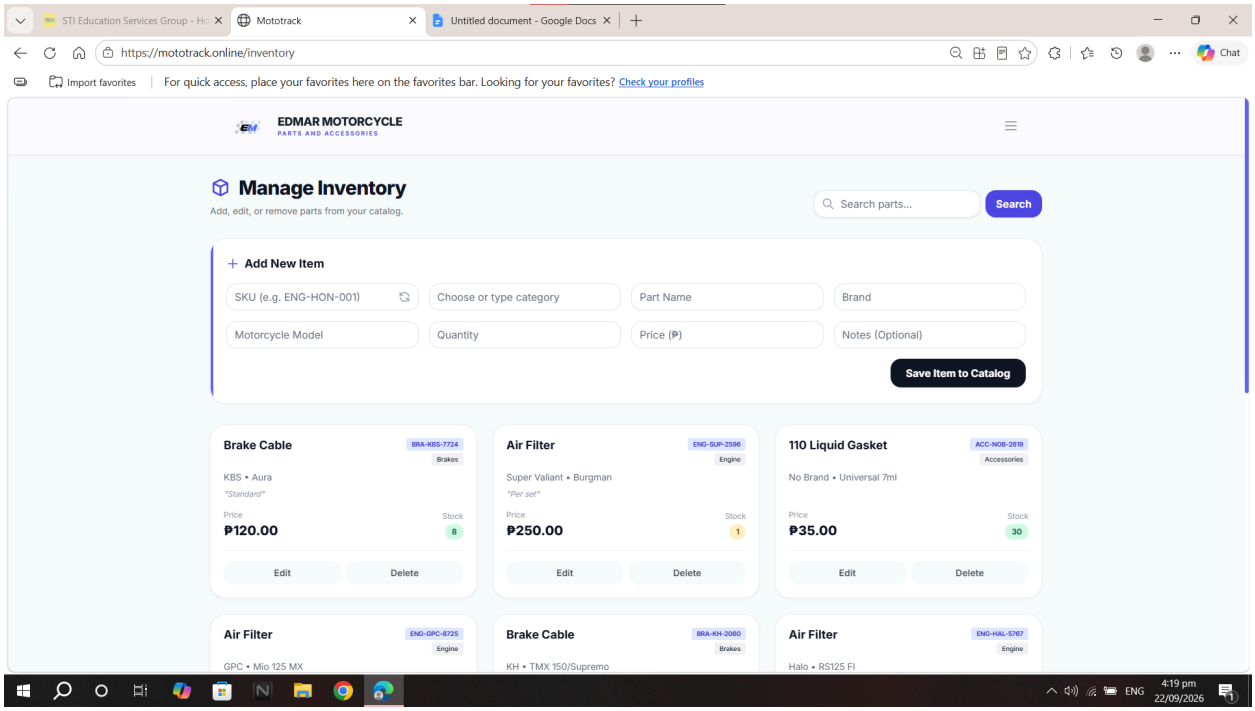

- realtime dapat yung sa pos din, dpaat may lalabas na negative pag may nag refund, mababawasan yung sa reports. basta realtime
- since pos dapat naka indicate din yung refund. green pag purchased, red pag refund

- yung sa pos dapat more than 3 yung maadd(nag error kasi kanina). tapos yung sa quantity dapat clickable and editable. and yung sa amount tendered dapat kung magkano lang yung sa products, yun lang din yon hindi kung gano yung nandon, hindi mag eexceed. Kanina nagtry si sir milyon kaya nagulat siya, ayusin nalang

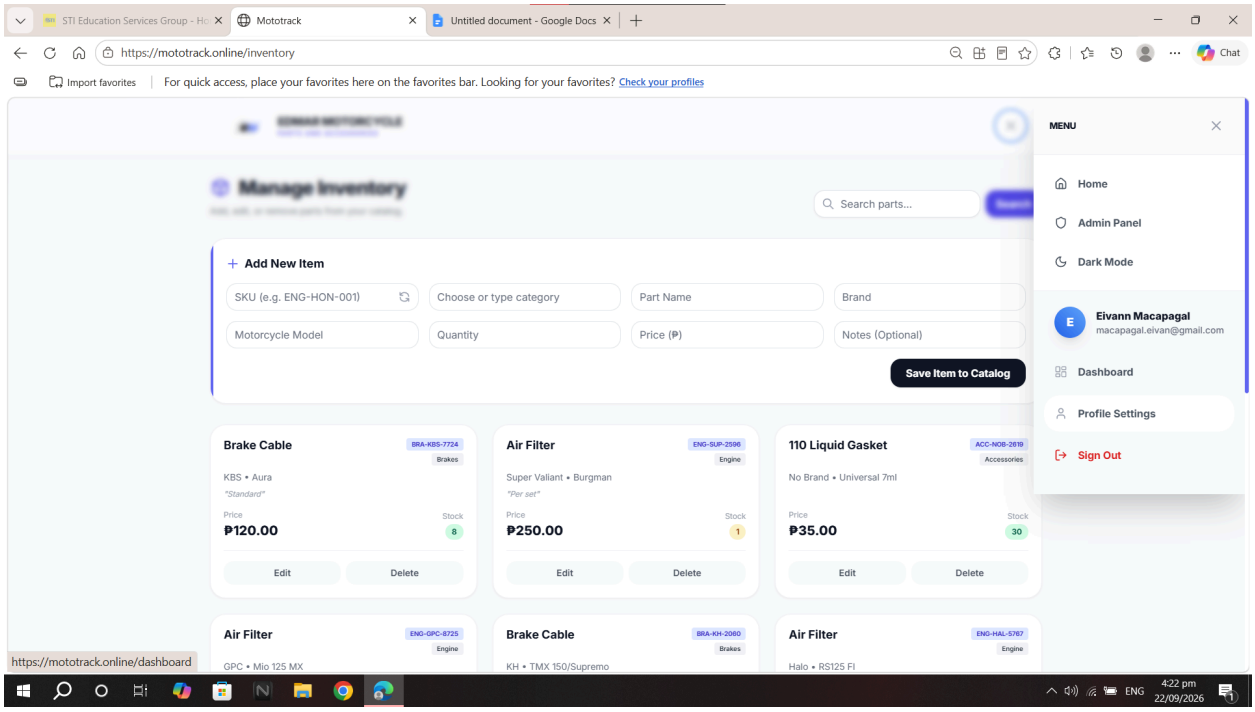

- sa inventory dapat drop down sa brand name, hindi typeable
- yung sa manage inventory dapat may filter para mapadali mahanap yung products tapos nasa baba nung add new item yung search. nasa left side yung filter tapos right side yung search. tapos dapat in order, alphabetical dapat a-z

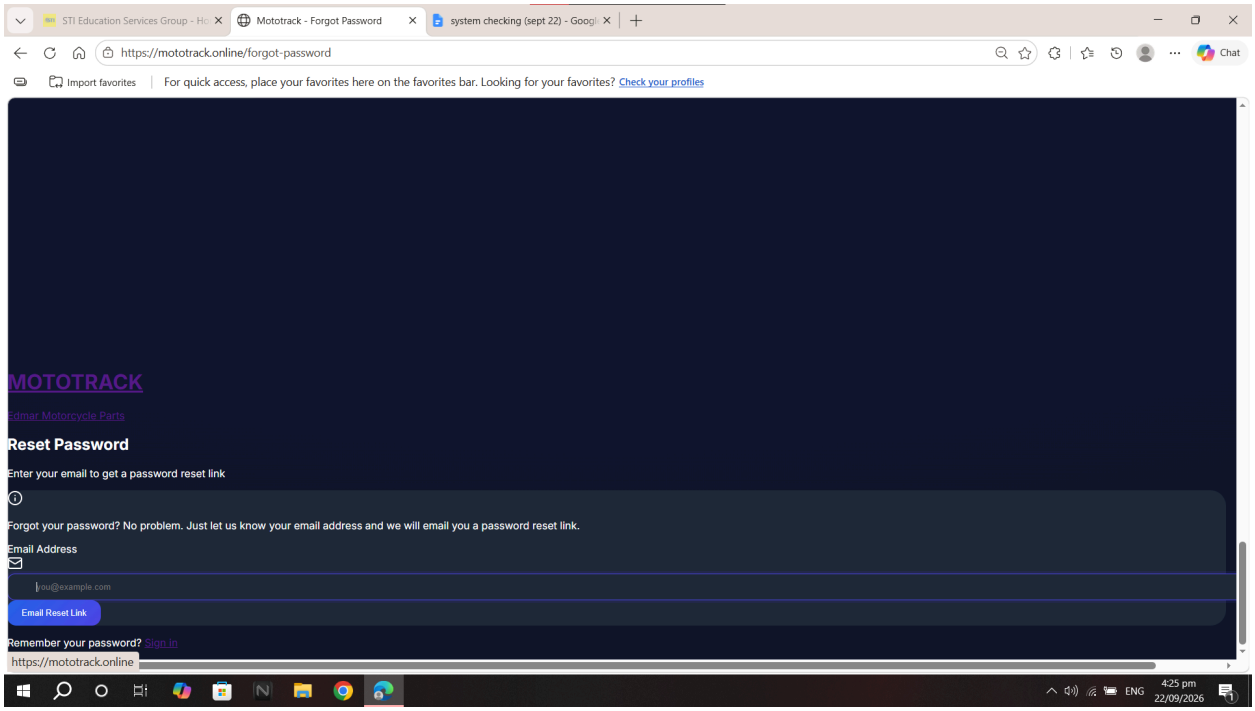

-And need ayusin yung header/nav bar talaga gaya hindi yung naka dissolve kasi mahihirapan mga naka desktop, sa mobile ganyan pero sa desktop or pc hindi, mahirap inavigate pag naka dissolve and basta mas maayos
-tapos yung notifications nawala sa customer and admin, mas better daw yon para pag may bumili or nag refund is malalaman agad

Ayan oh dapat nakalagay sa header/navbar yung admin panel, dark mode and notif ganon. Tapos drop down menu para sa profile, dashboard, sign out ganon, ganun din sa customer

-forgot password di pa naaayos

- need check lahat, nag 404 error yung iba kanina
- responsiveness sa ui for desktop and mobile
-security
-realtime inventory or in general
-yung navbar sa customer and admin is di makakaapekto sa header sa landing page parang ganon
