Yung navbar/header ayusin, icenter lang yung mula home to contacts, yung dark icon to get started is right dapat, parang dati. Pwede rin yung header nung kila dustin, check 2nd pic. Ganyang header mas okay

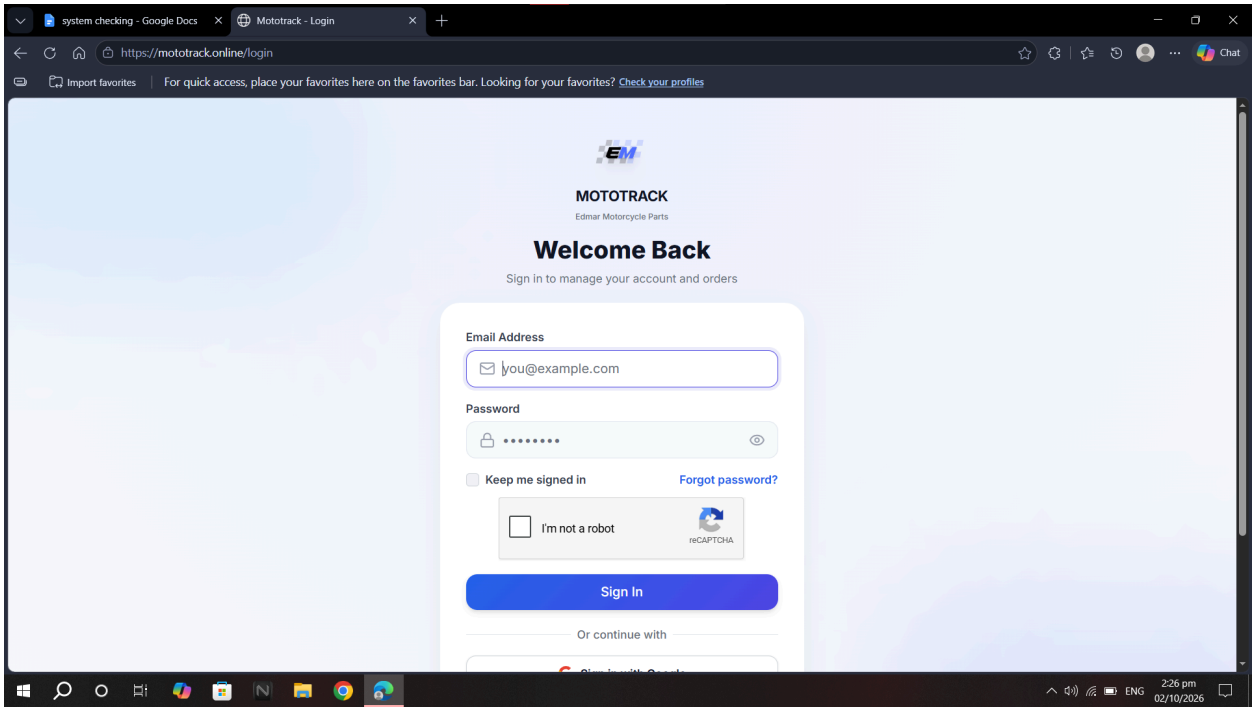

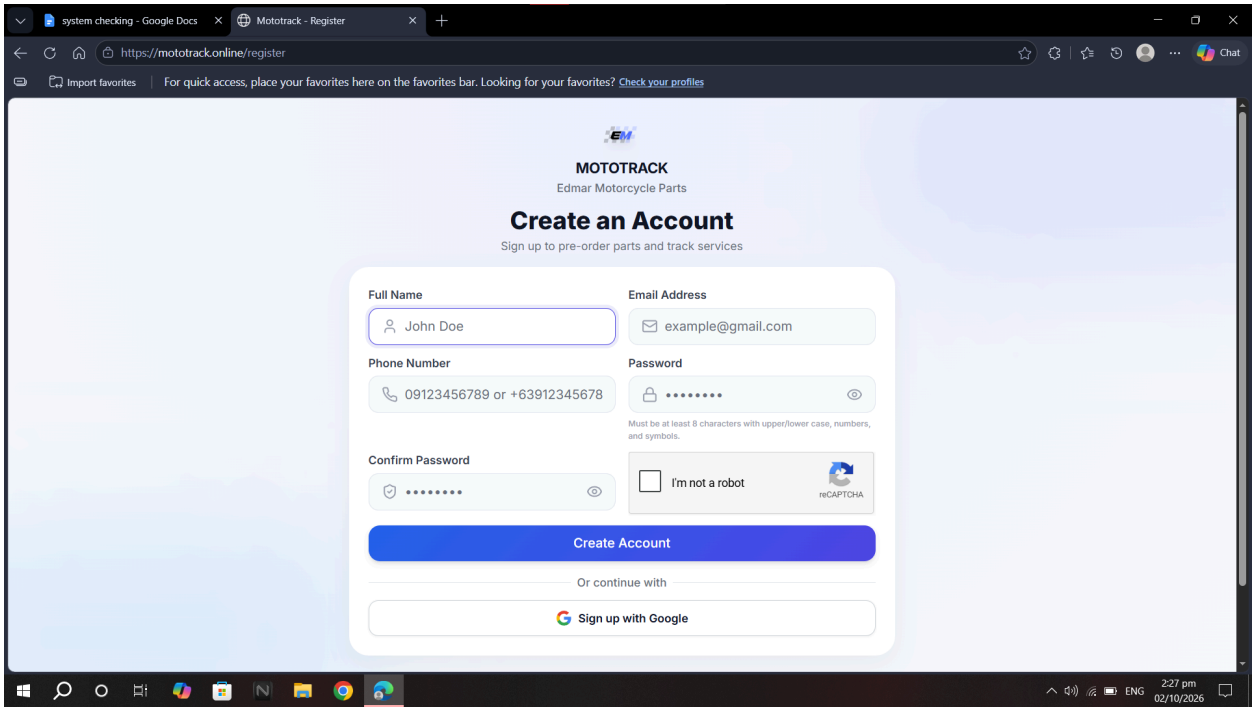

Ibahin color scheme, ui, and fonts nitong sa preorder. Iba kasi to as compared sa ibang part. Ayan oh, check mo rin header. Magkakadikit na. Mas okay yung dati, need lang icenter yung home to contact

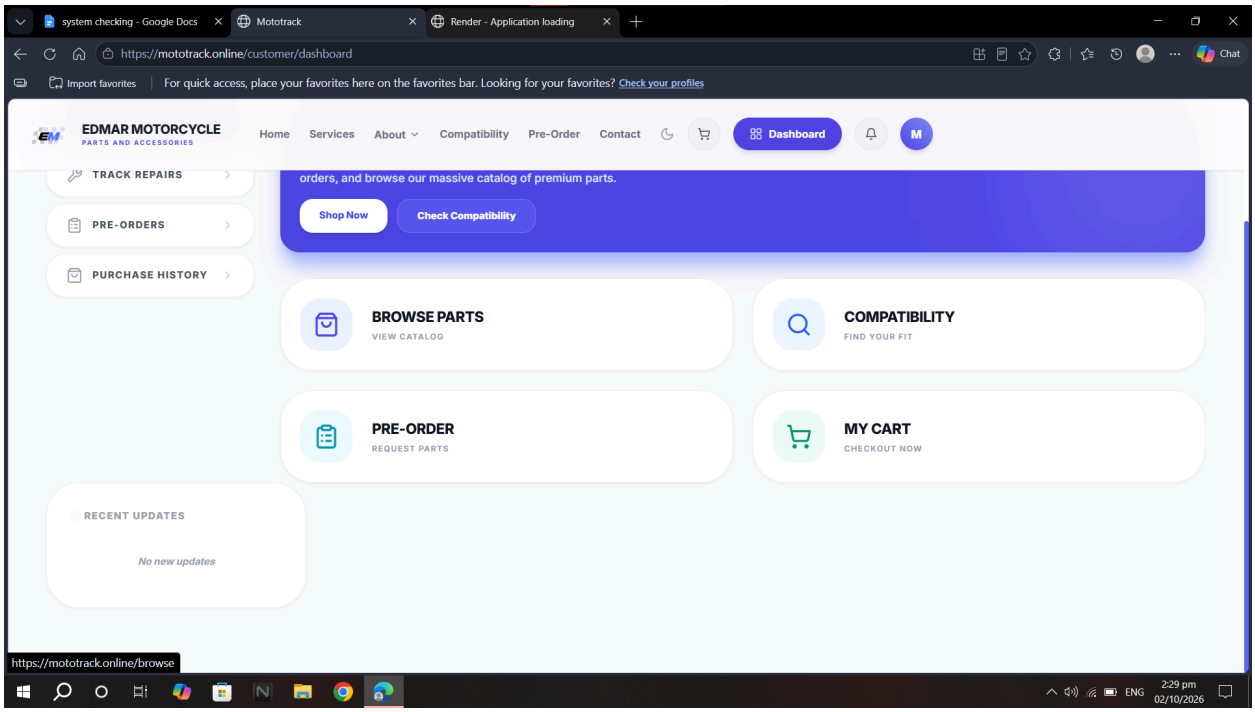

Lagay otp input filed pag mag sign up or sign in din pwede para mas secured. Tapos if nakaka 5 password errors or misinput, di muna makakapag type in 30 seconds ganon

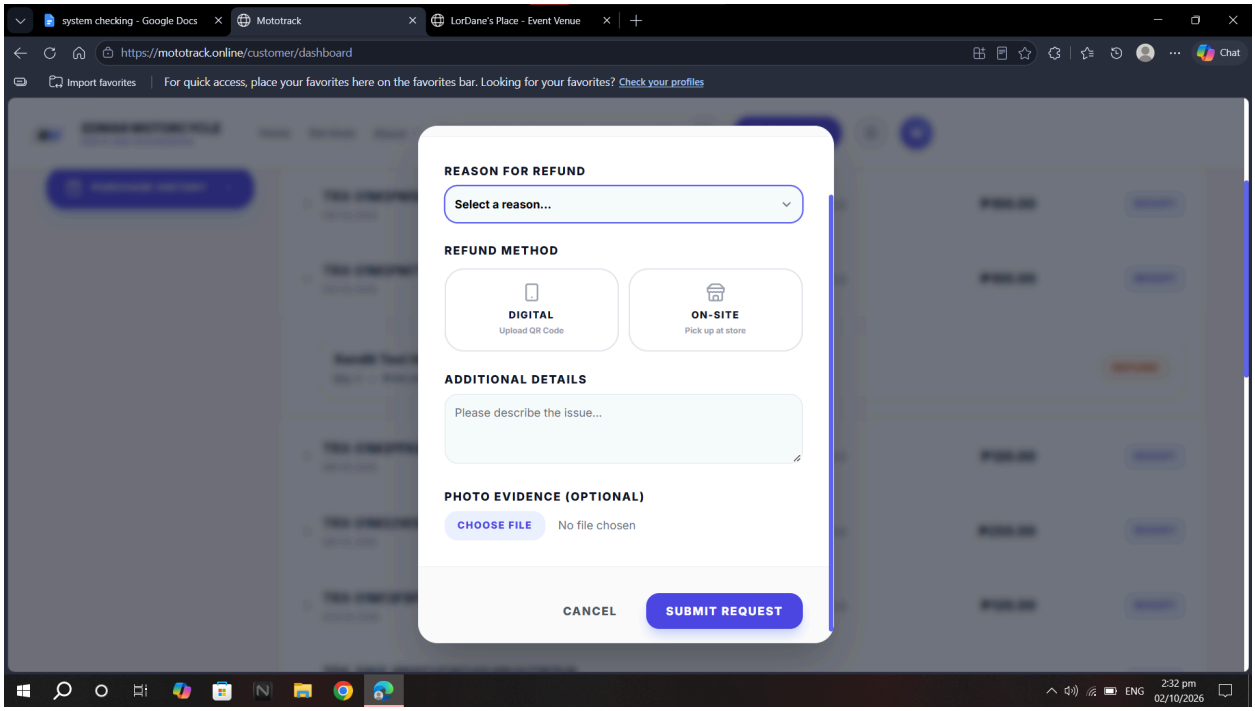

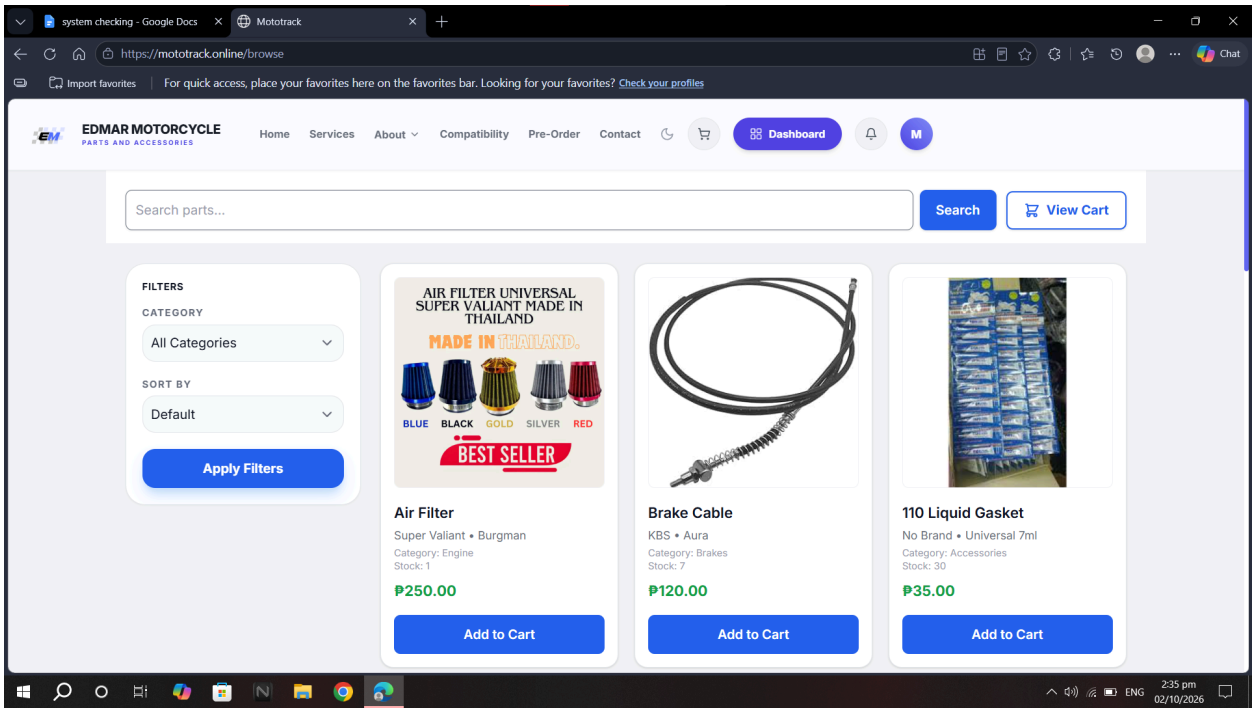

Imove yungrecent activitysa tabi ng “welcome back, mototrack”. Aalisin na yung browse parts, compat, preorder and my cart sa dashboard, yung apat na nasa baba ng welcome back since existing naman na. Bale magkatrabi na yung welcome and recent activity. Dito wala na scroll action kasi nandyan na lahat pag tinanggal yung sinabi ko

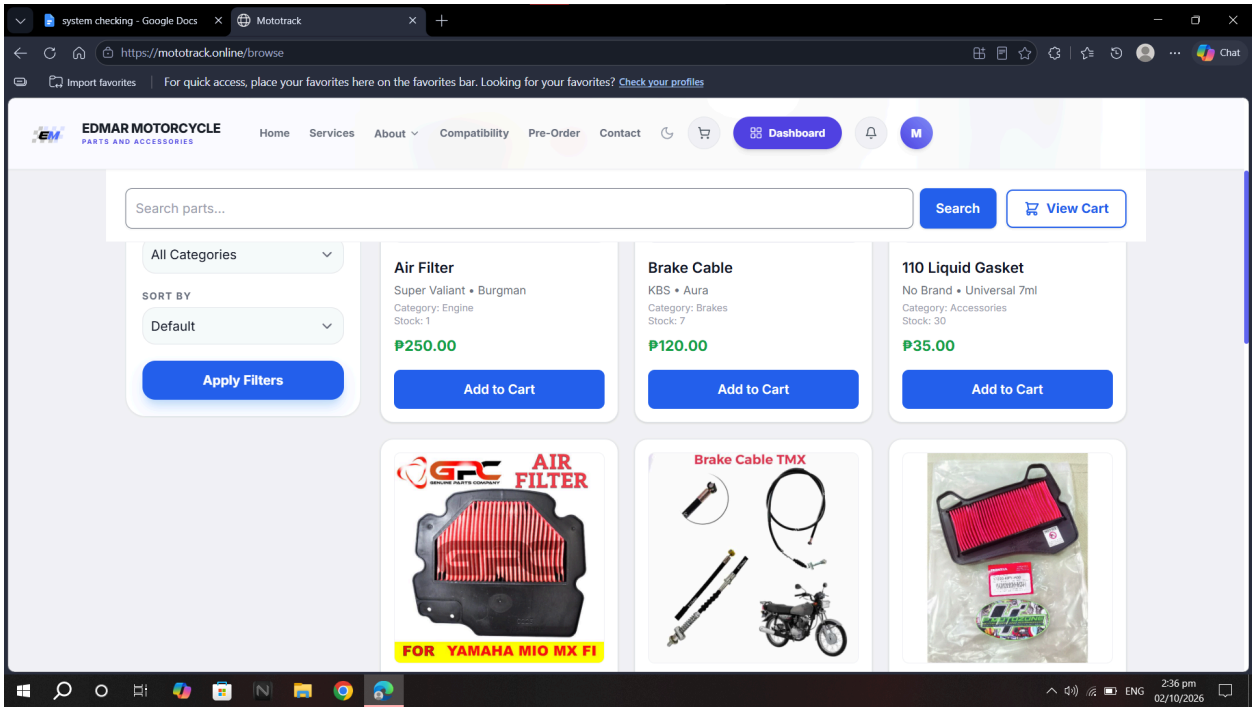

Tapos yung ganto, if kaya naman na wala na scroll, mas okay. Imaximize lang yung space. Check mo rin sa iba

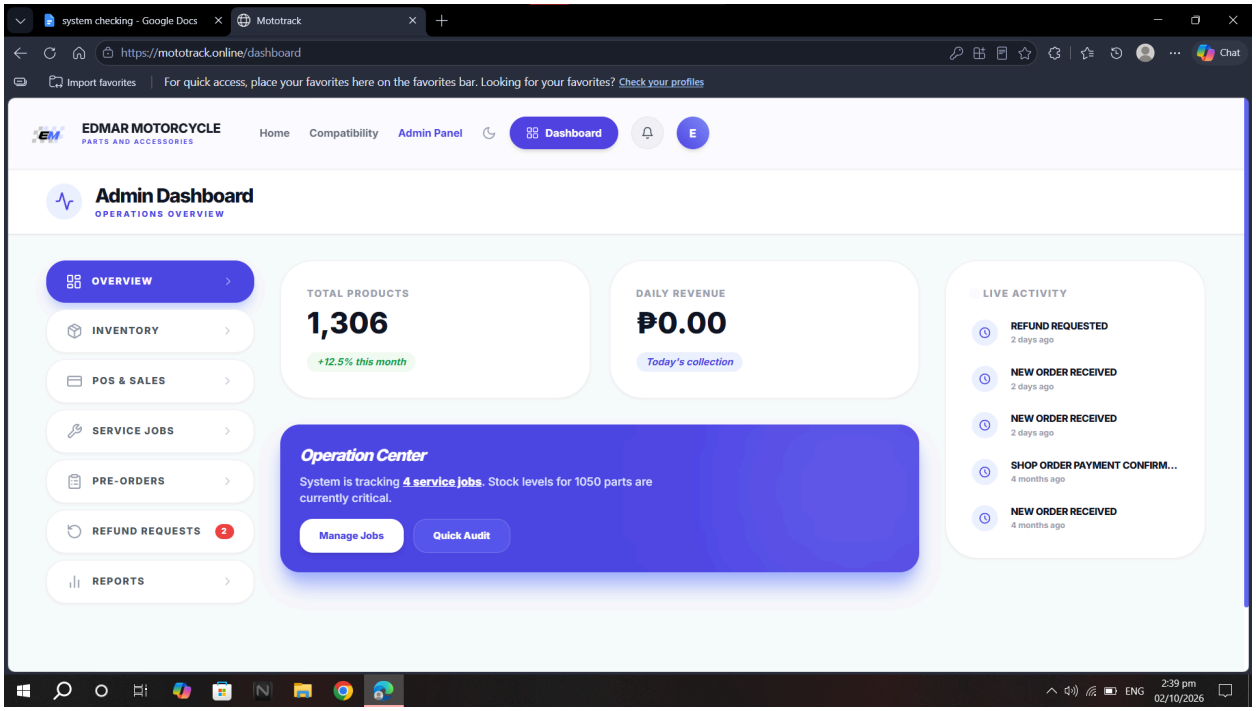

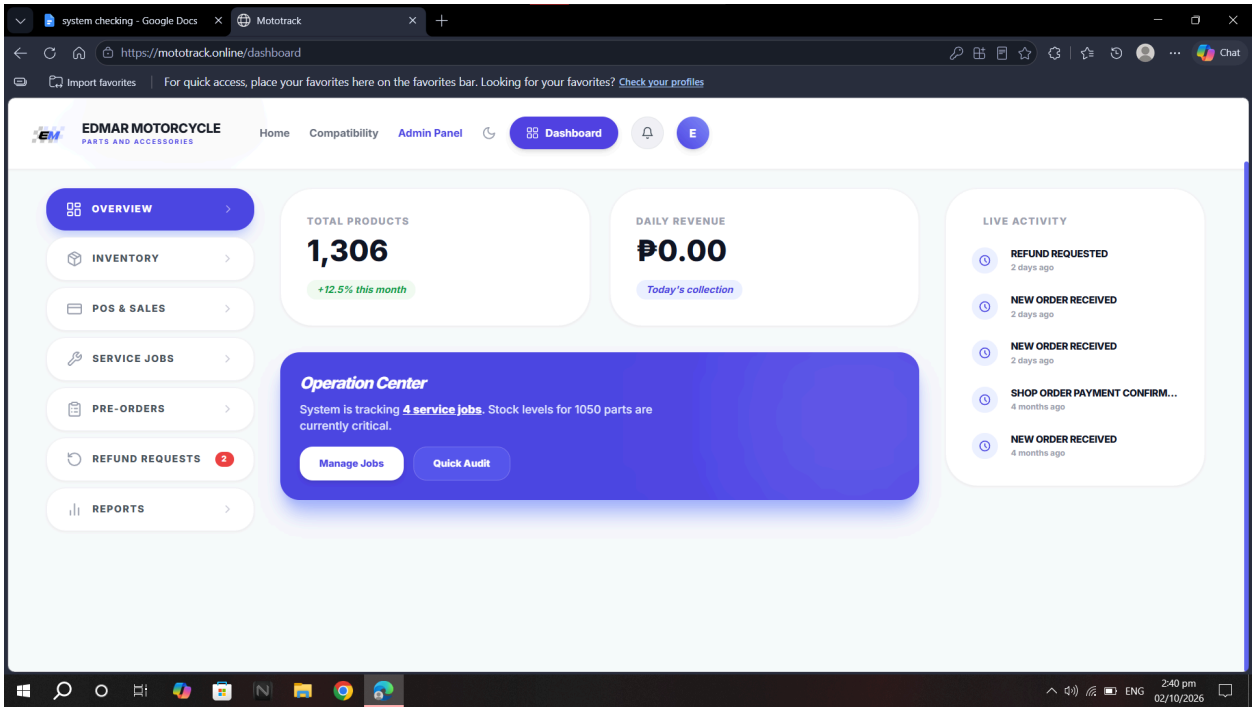

Tapos yung filters dito sa product catalog is dapat fixed position, hindi dapat nagagalaw pag may scrolling action yung users. Check 2nd pic, nagagalaw

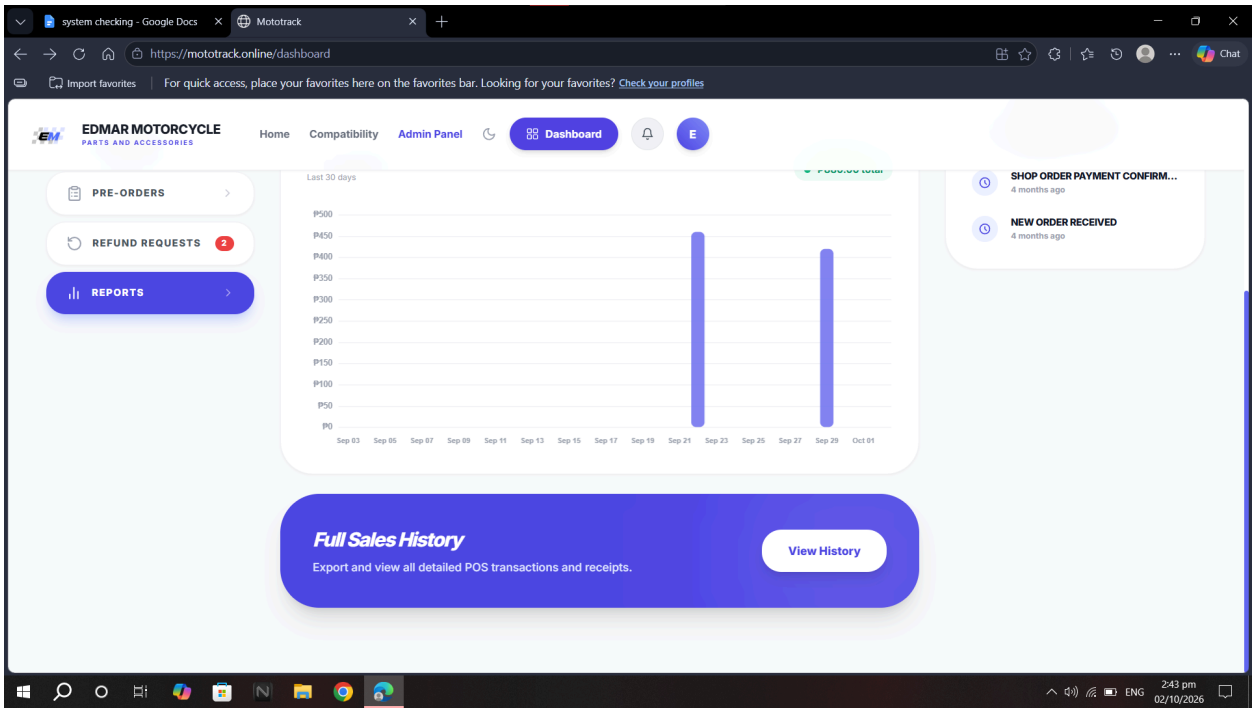

Pag open nitong admin dashboard dapat hindi na scrollable itong sa overview part since nakikita naman na lahat. Dapat yung first pic lang ganon, hindi scrollable, sa customer dashboard rin dapat ganon once edited na rin. Tapos yung sa live activity, dapat sa overview lang meron non, sa iba wala na. Imaximize yung space para sa inventory hanggang reports, as much as possible imaximize para kita agad. Tapos dapat fixed yung admin dashboard na header, parang yung sa search button na pinaayos ko, ganun din sa customer dashboard. Basta scrollable pag merong nasa baba, if wala, hindi dapat scrollable. This applies sa lahat

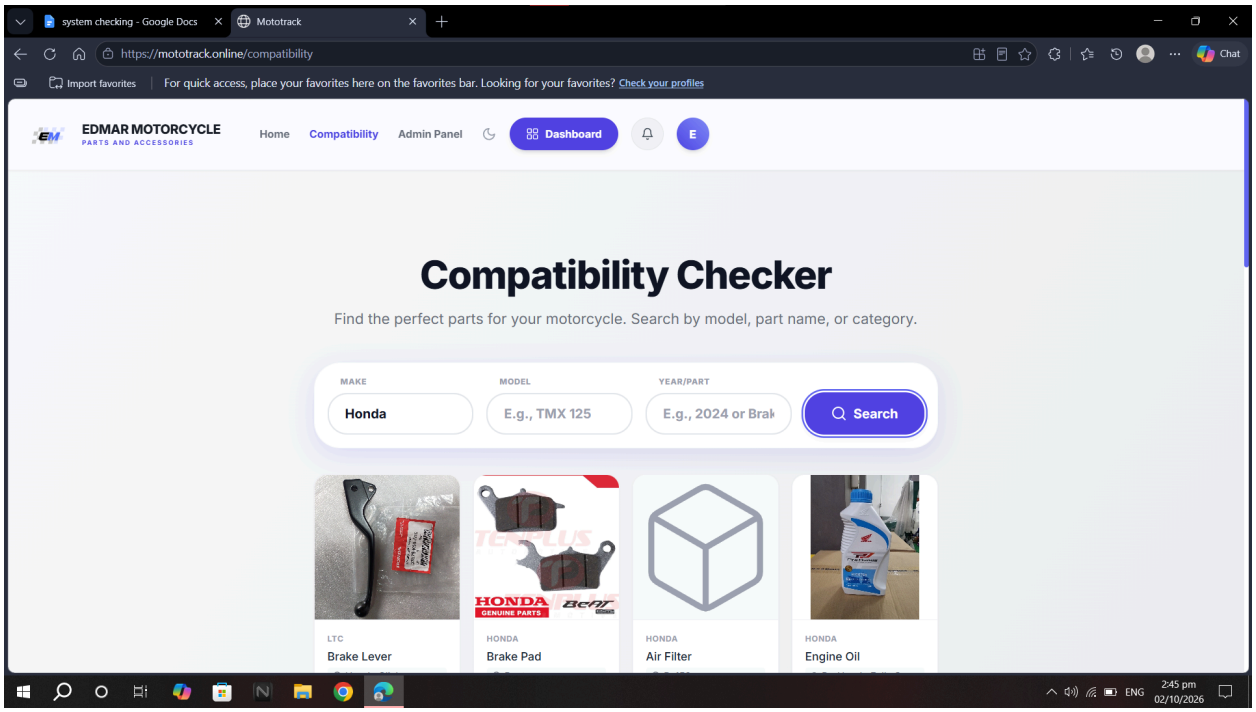

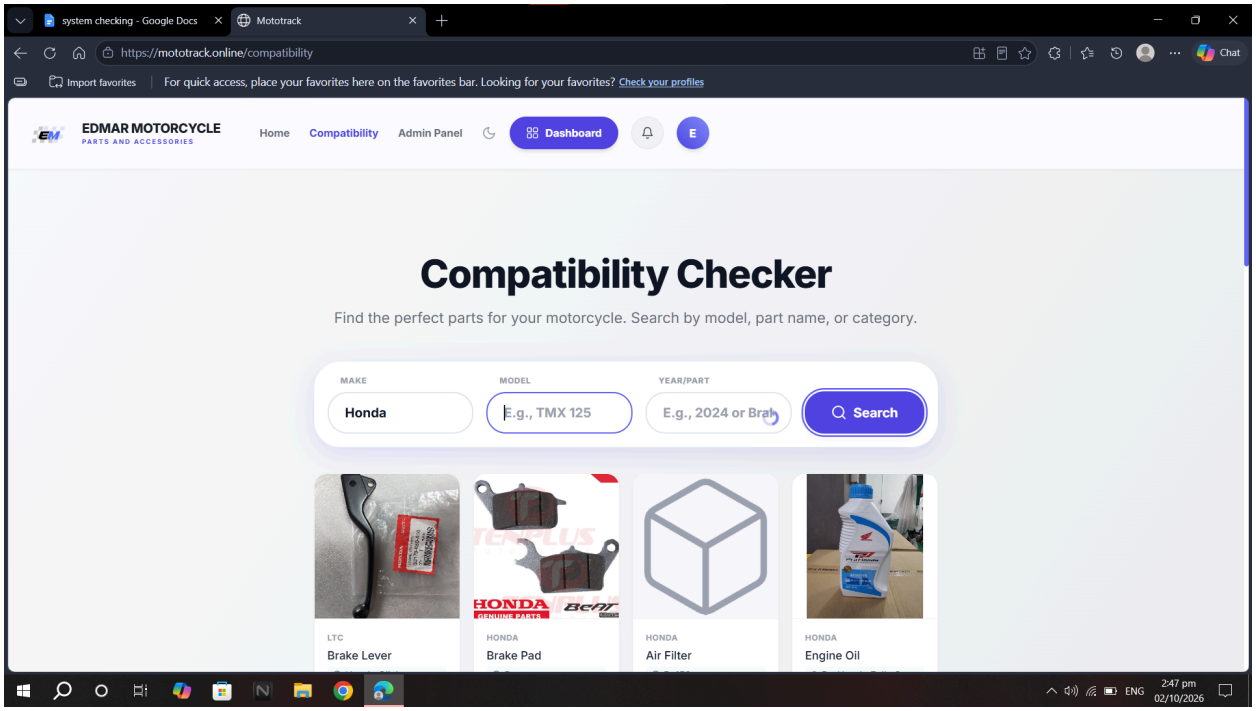

Gaya nitong sa reports, para mamaximize yung space iremove na yung live activity and iadjust yung iba

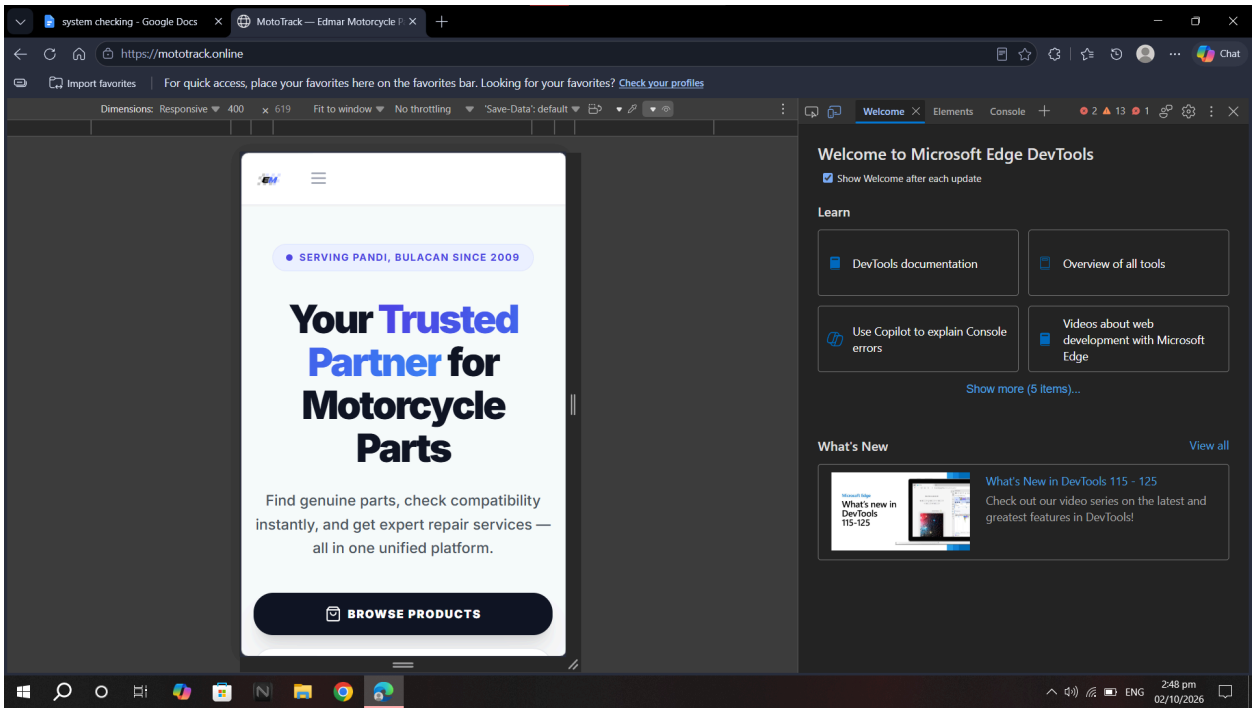

Tapos dito sa compat checker, mas convenient pag kunware diba gagawing drop down yung sa “make”, and lalabas lang sa “model” is yung kung ano lang yung available sa “make”. Mahirap kasi pag ittype tapos baka kung ano lang ittype ng user. Much better if drop down nung make, model and yung year/part

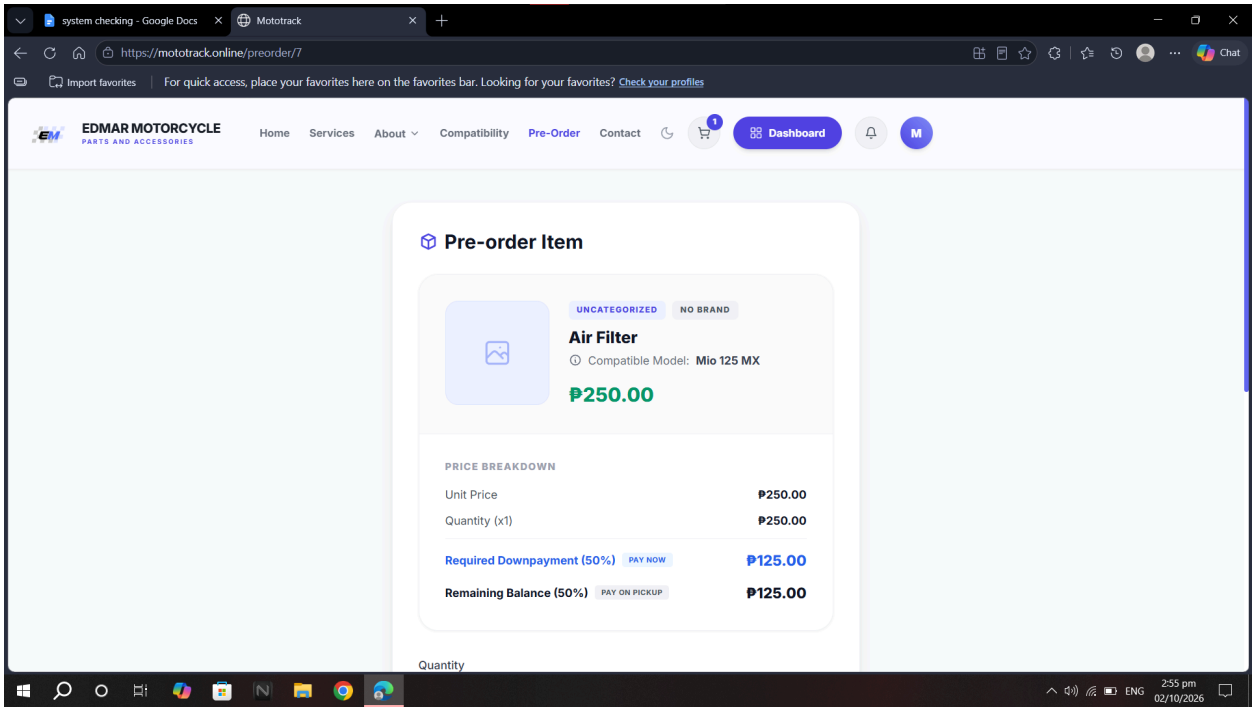

Kunware dito, nagtype ako honda pero di ko sure ano model ko kasi wala nag aappear, mas okay if dropdown para easy access and convenient

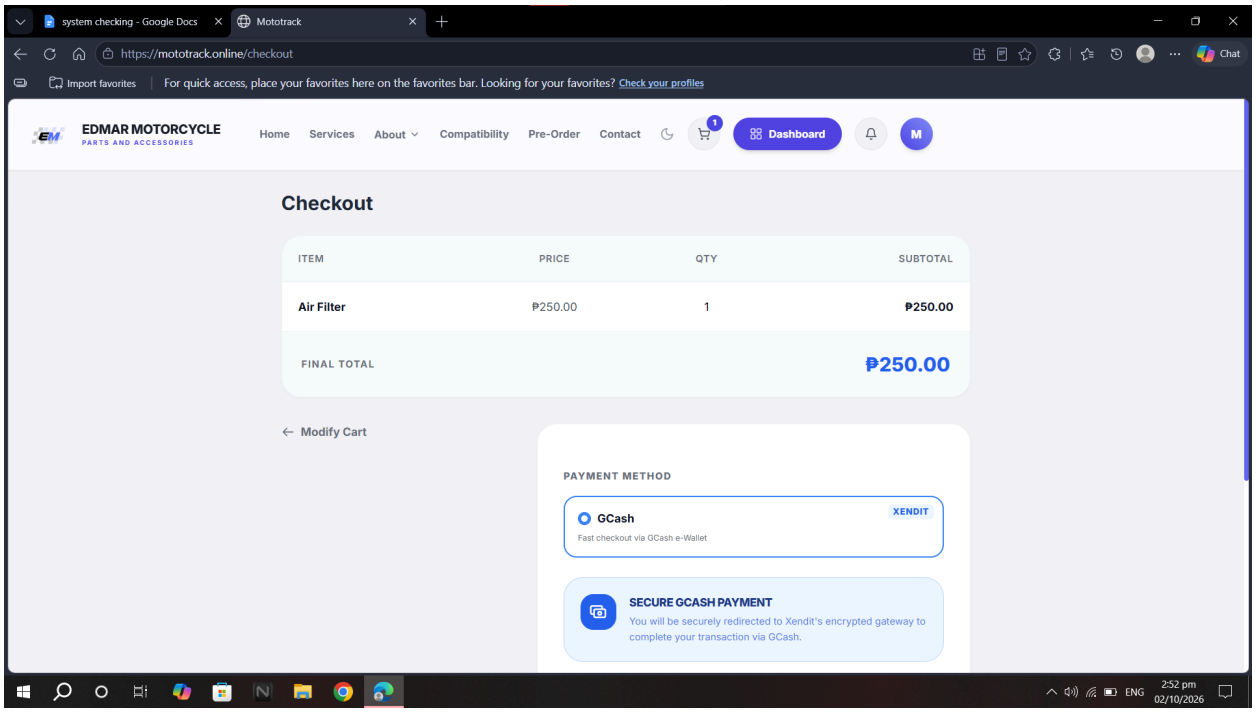

Tapos dito, check din functionality and responsiveness sa phone. Gaya nyan, naka left side rin yung menu, basta ayusin

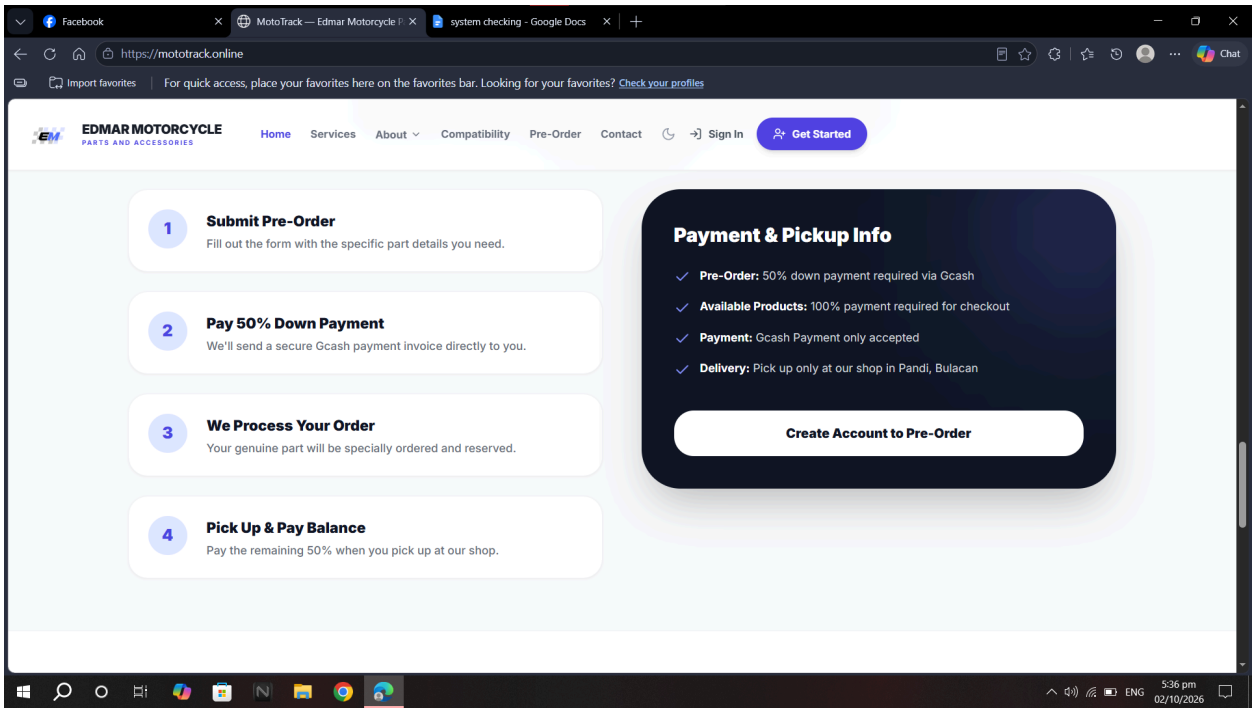

Tapos yung dito sa payment sa full check out and placeholder dapat nakalagay is yung sa “scan qr code”. Alisin nalang yung placeholder for image sa preorder, kahit wala namang image okay na yon. Yung dito, aalisin na payment, as in **reservation** nalang. Wala na payment

Yung dito, iibahin yung details. Bale same pa rin number 1, yung number 2 aalisin since wala na downpayment. Submit pre-order, we process your order, pick-up and pay balance(aalisin 50% off) same goes sa payment and pick-up info. Pre-order: reservation only, available products: reservation, payment aalisin, delivery: pick up only and payment only before getting the reserved products. Parang ganto, basta wala na downpayment and full payment, purely reservation. Tapos paki add pala na within 24 hours dapat na pick-up na yung reservation and pre-order, if di nakapunta and nakapag bayad sa shop during that 24 hours period is automatic cancelled na yung reservation and pre-order

Pakipalitan nalang din yung ibang parts if may maaapektuhan

- Check functionalities
- Check responsiveness
- Test for ui sa desktop and mobile
