PC: USER SIDE

Yung dito, paki check maigi yung font color sa buong webiste pag light and dark mode, for example yung sign in, di na nakikita,dapat white, pero grey na itsura. And paki-iba na rin yung logo, may designated na light and dark mode na yon, paki check nalang sa link ng canva, nasa gc

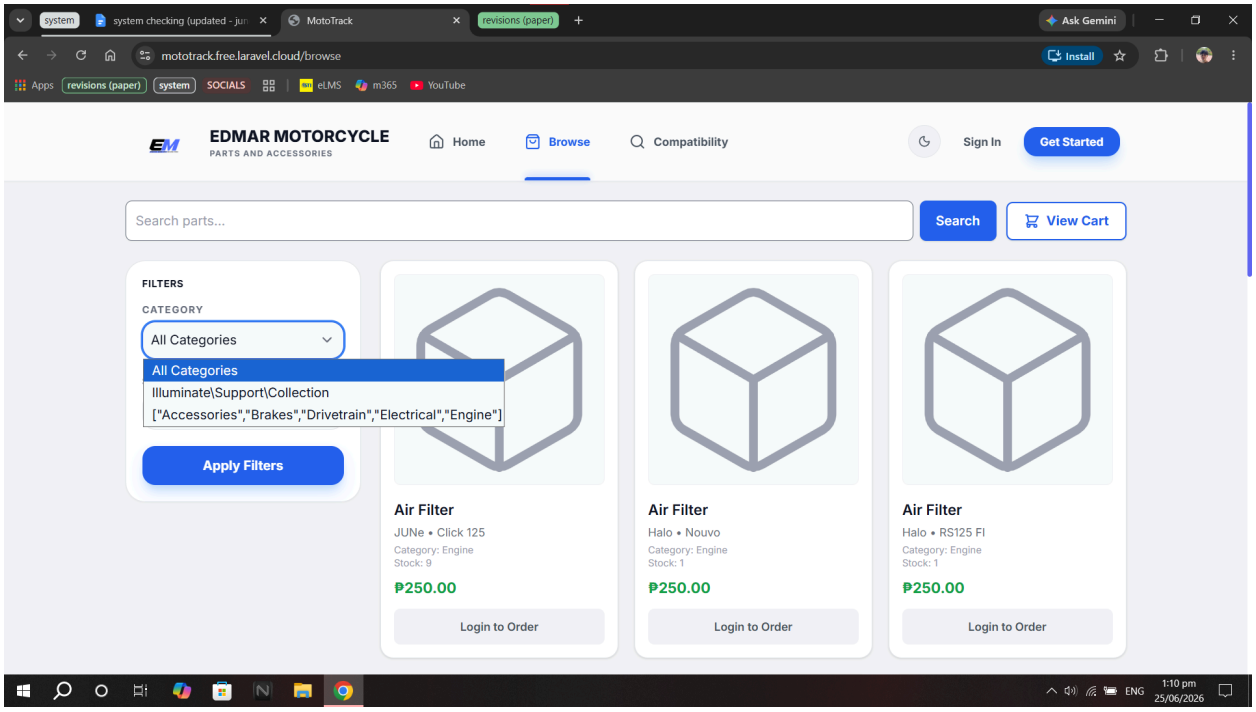

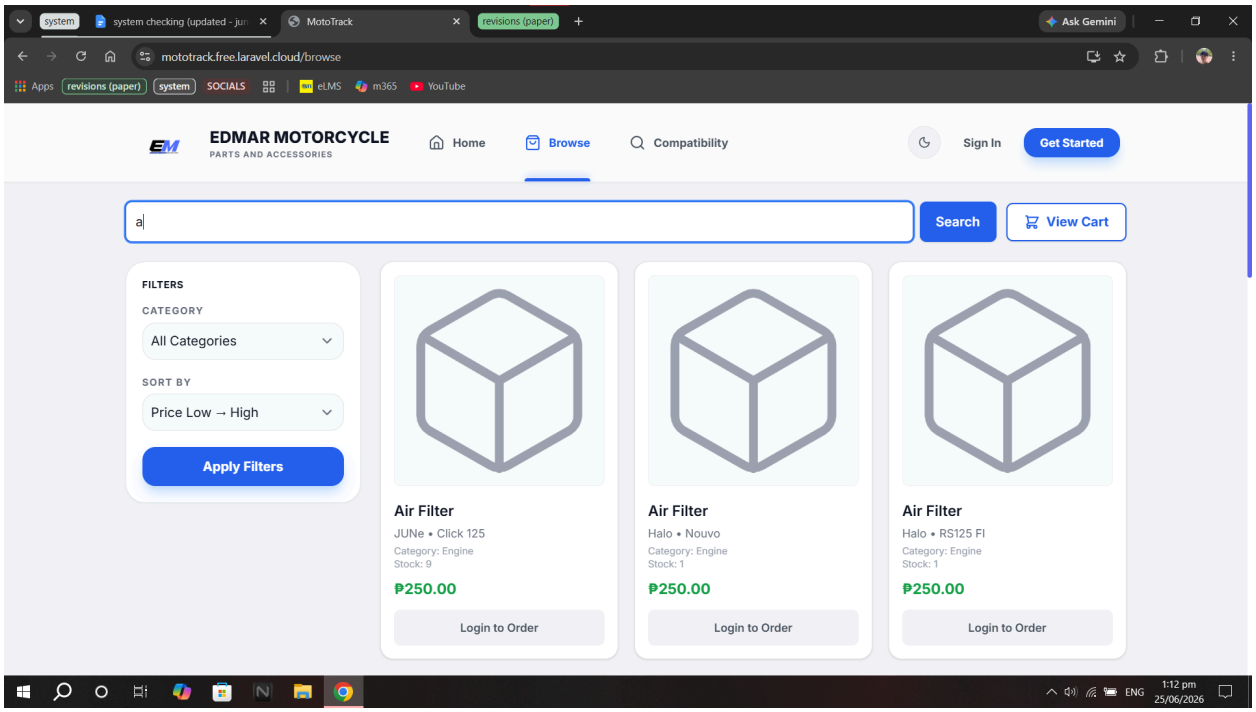

And yung compat checker, same pa rin, pakiayos nang maigi, baka hindi nauupdate

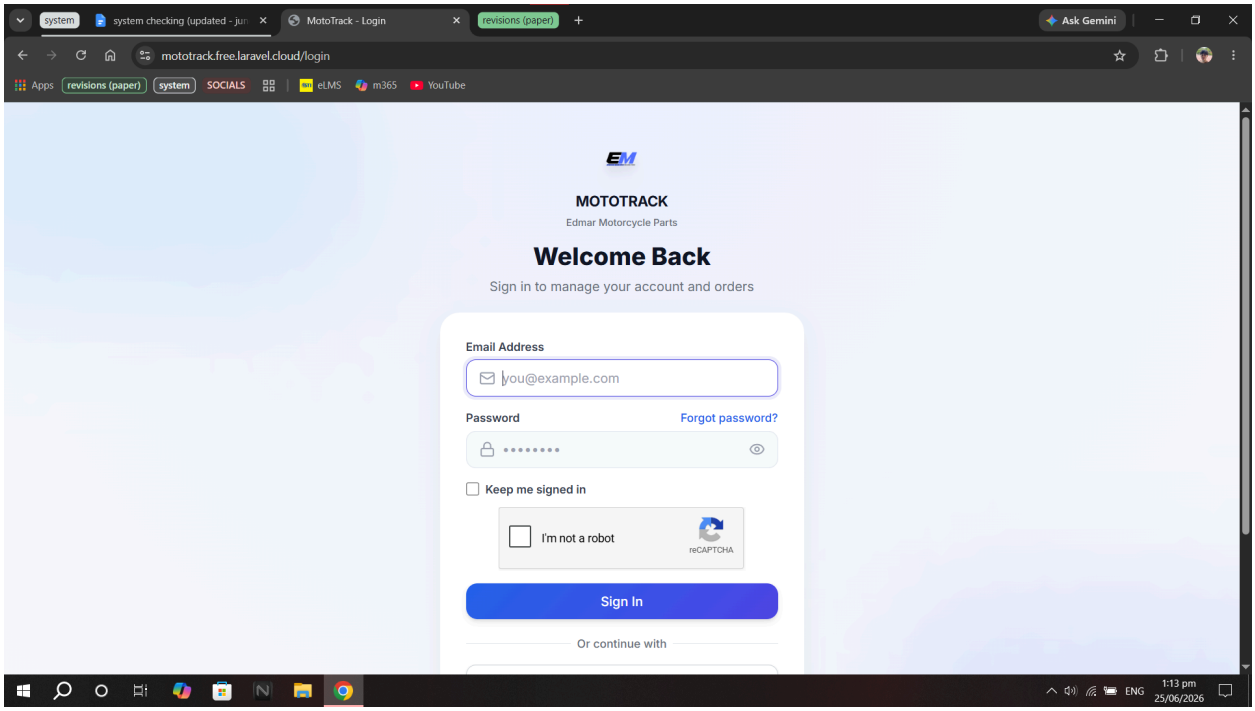

And yung dito sa filters, don sa categories, mali yung lumalabas, check the image below. Paki-ayos yung filters. Yung categories and sort by, dapat akma

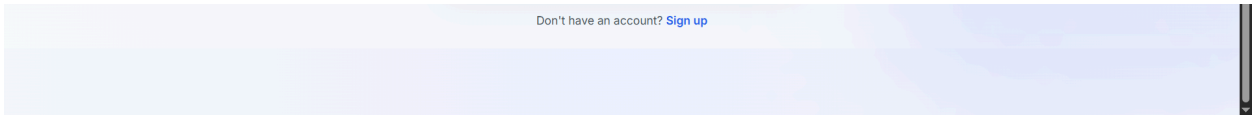

And yung ditom much better talaga if may suggestions sa search para di na manual typing yung customers. Unlike sa image below na need itype as is yung product

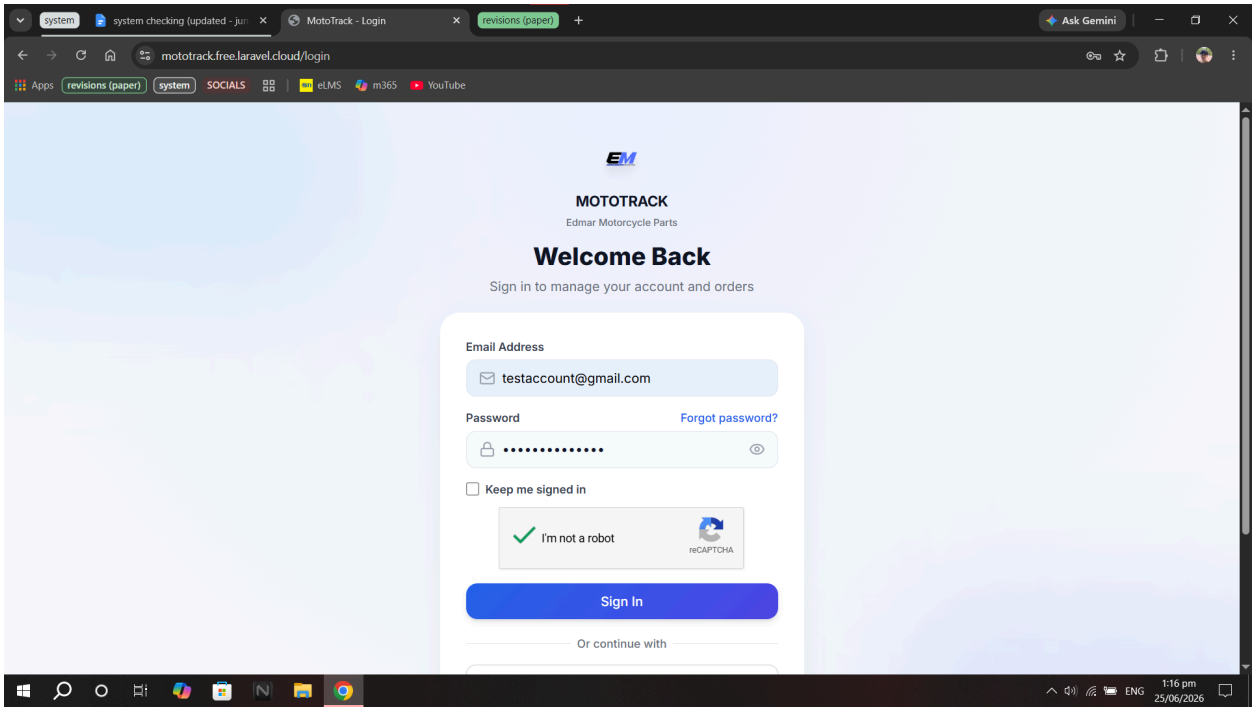

And dito sa login/register, hindi talaga kaya na nandon na agad, di na need iscroll down, ito kasing sa picture need pa iscroll down, unlike sa ibang sites na nandon na agad lahat, sabi rin to ni sir ceejay. Paki-ayos nalang din

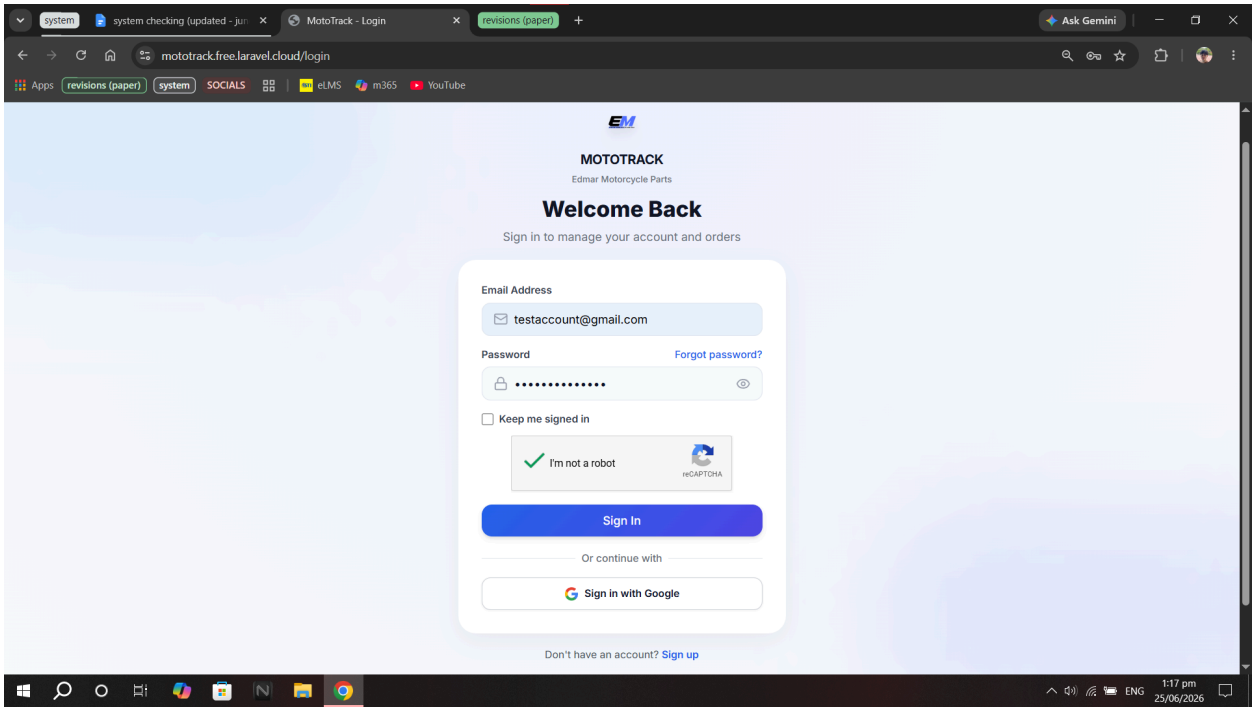

Tsaka dito oh, may space sa baba, need mawala to, kaya need ayusin yung layout sa login/register

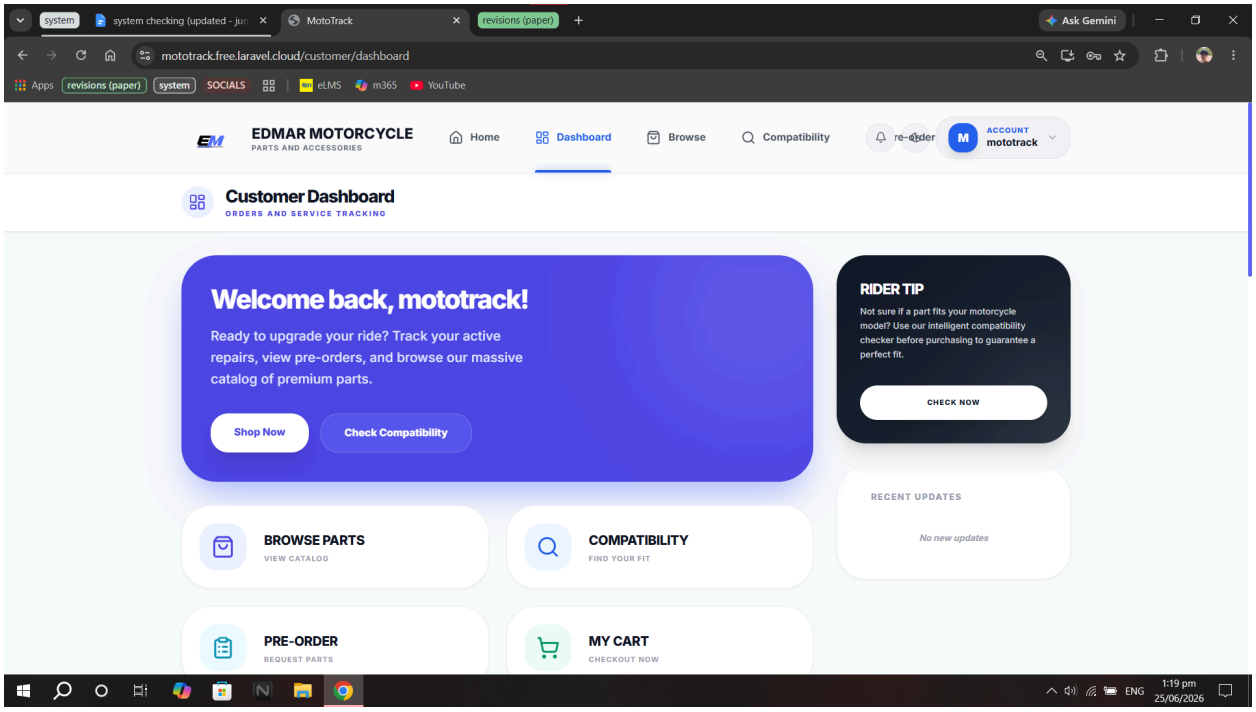

Ayan oh gaya nito, cut yung login, need maiayos

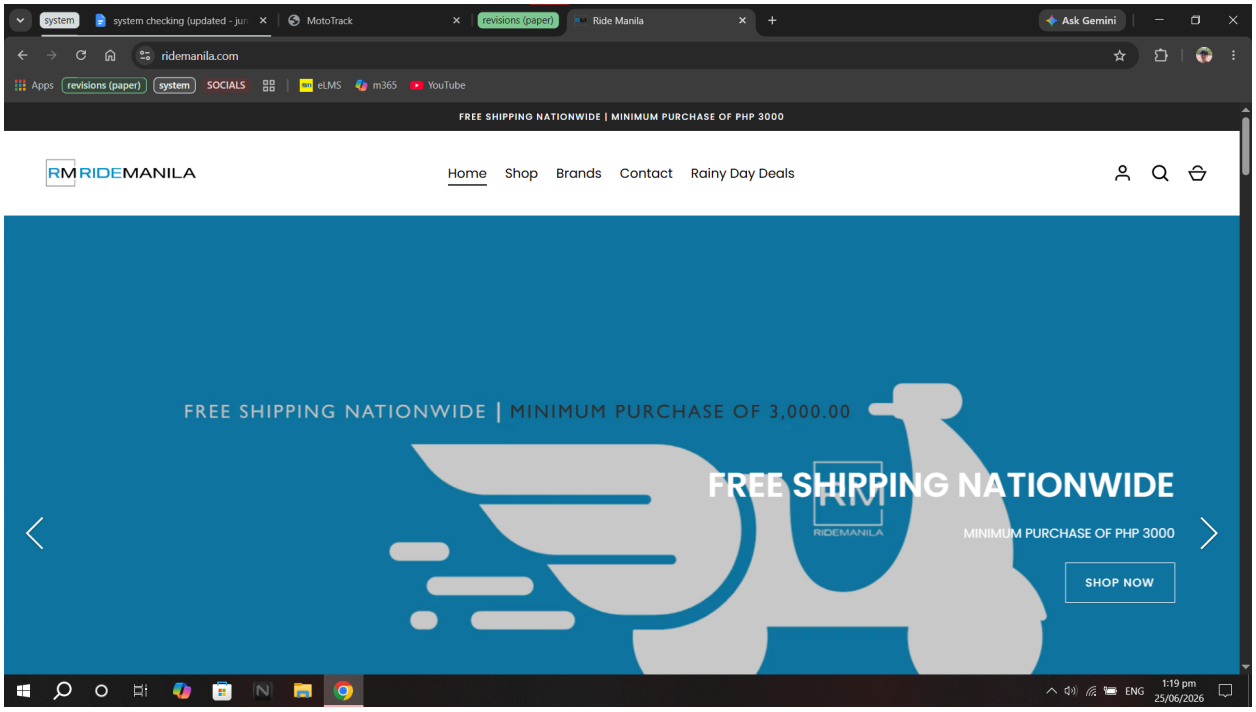

Dapat ganto kakalabasan, yung kita na agad lahat, inadjust ko lang yung zoom sa site kaya ganito kinalabasan, paki-ayos nalang. Dapat pati sa register/sign-in maiayos din

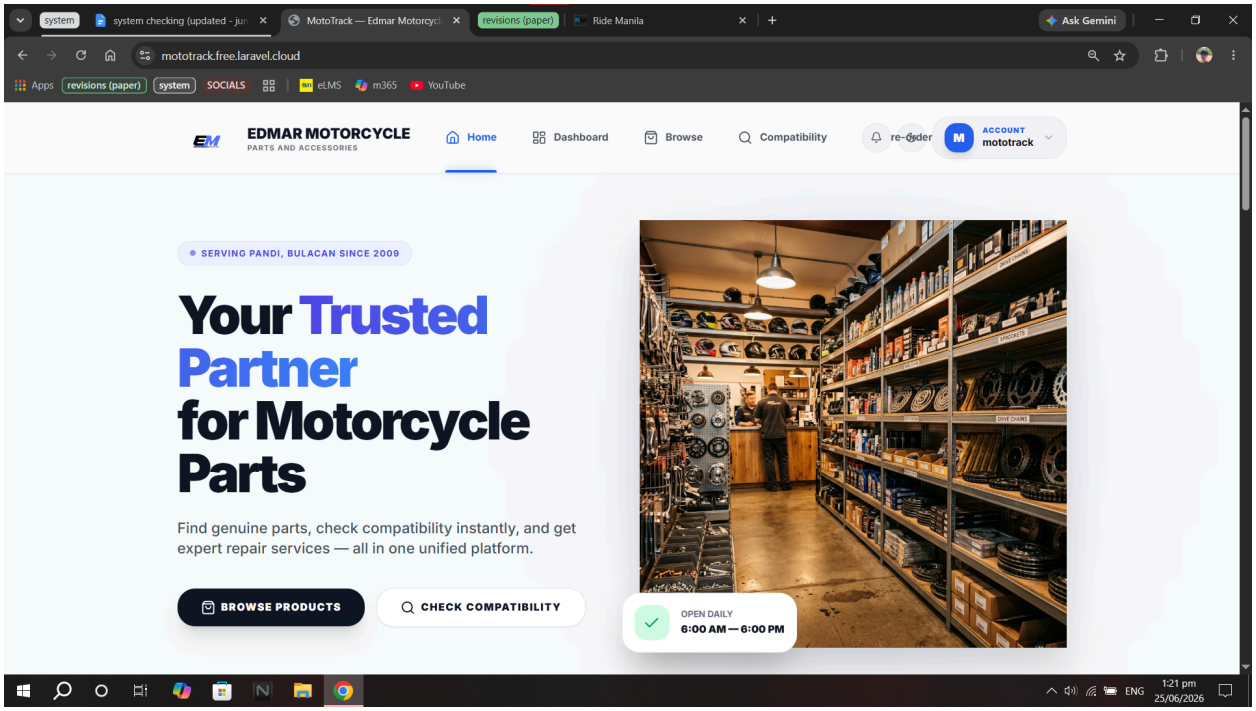

Tapos dito sa customer dashboard, di maayos yung placement nung sa header

Eto example lang for logo placement sa header, sa ride manila, asa gilid siya unlike dun sa system natin na nasa gitna din. Paki-ayos nalang din

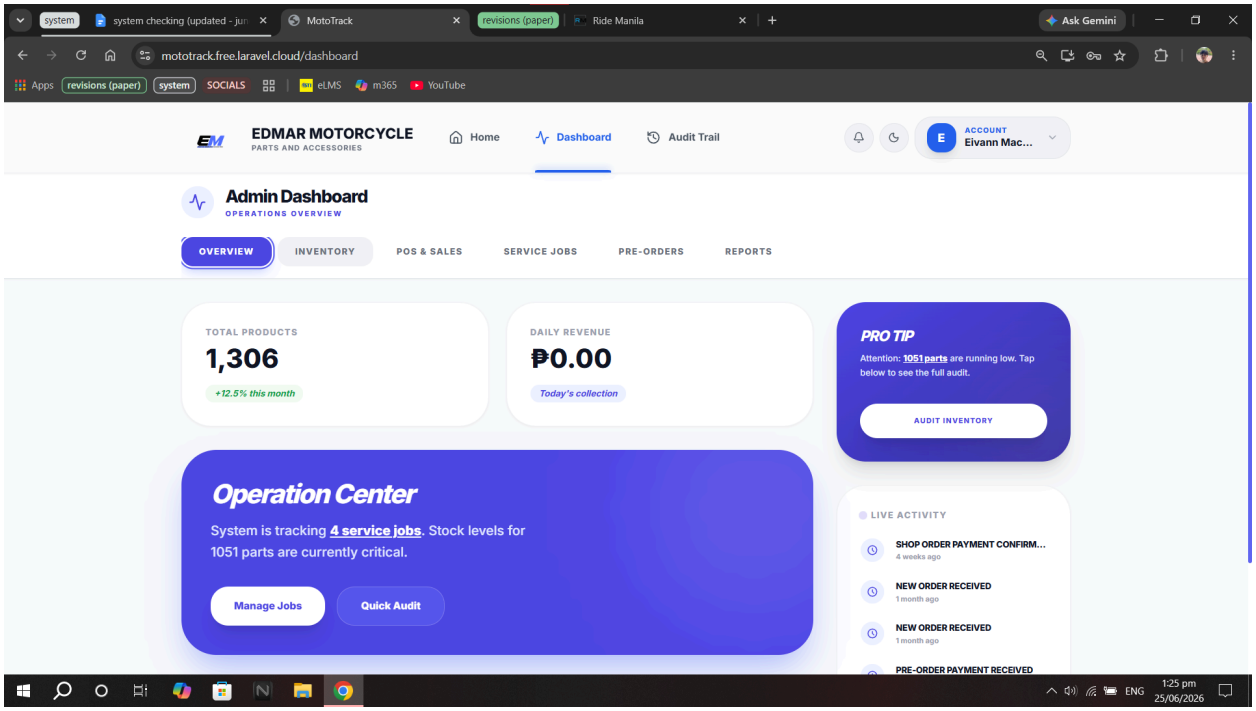

Tapos dito pag nag login yung customer, pag nag back to home, maiiba yung nasa header, dapat same pa rin yon kung ano yung nakita nila sa landing page before sila mag login. Dapat home-browse-compatibility pa rin nandon

Basta yung sa user side, paki check nang maigi lahat. Thank you

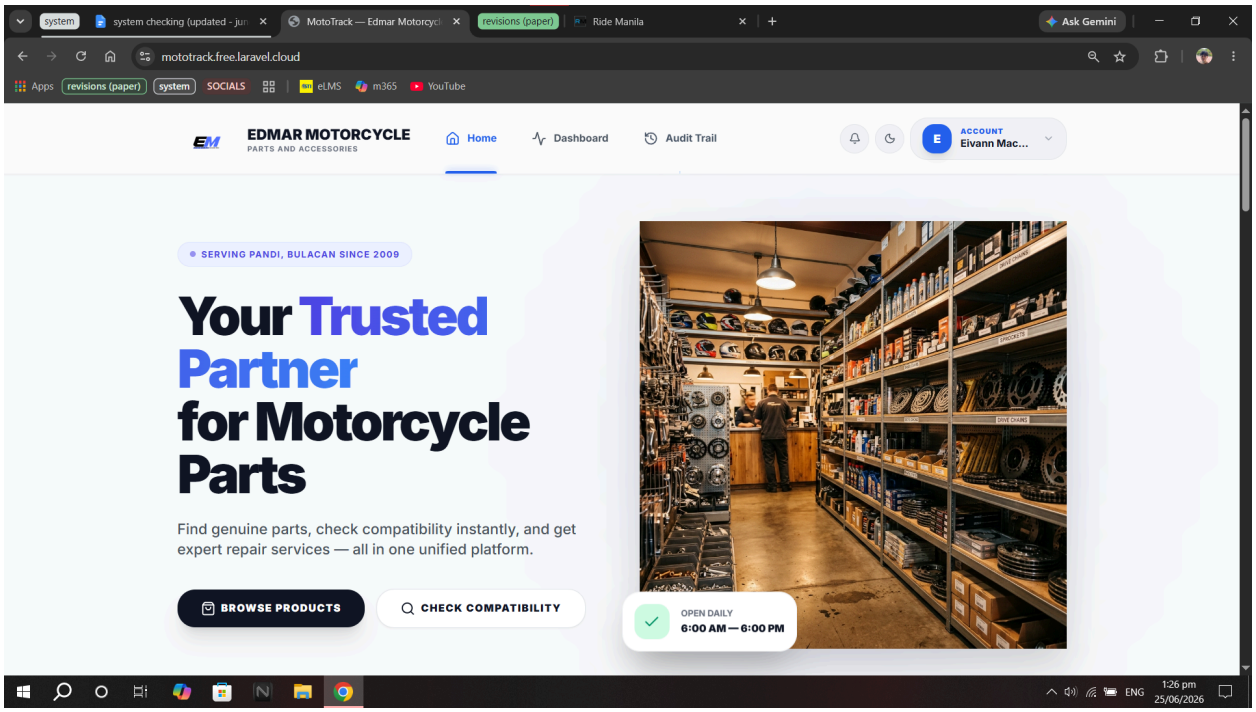

PC: ADMIN SIDE

Same prob pa rin, cut yung sa overview hanggang reports na boxes, need maiayos

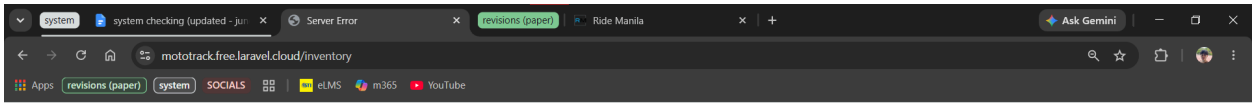

Same problem sa user, naiiba yung sa landing page, need same pa rin asa header

Tapos sa inventory may error

500 | Server Error

Ayun palang so far, pero please paki-check nang maigi yung responsiveness, yung layouts, yung font colors/sizes. Basta as in lahat paki-check nang maigi. If kaya na sa isang page without scrolling down, mas okay. Based kay sir ceejay din para hindi mahirapan yung user. And if kaya na mas malinis tingnan, go na yon
